| Stress level | | | | | | | | | | |
| Low | | 258 (43.1) | | 38 (34.2) | 0.225 | | 249 (43.7) | | 47 (33.6) | 0.070 |
| Moderate | | 260 (43.4) | | 60 (54.1) | | | 246 (43.2) | | 74 (52.9) | |
| High | | 81 (13.5) | | 13 (11.7) | | | 75 (13.2) | | 19 (13.6) | |
| Mood | | | | | | | | | | |
| Feeling down | 598 | 113 (18.9) | 112 | 20 (17.9) | 0.796 | 569 | 109 (19.2) | 141 | 24 (17.0) | 0.561 |
| Anhedonia | 597 | 88 (14.7) | 110 | 13 (11.8) | 0.421 | 567 | 75 (13.2) | 140 | 26 (18.6) | 0.106 |

Number and percentage of participants are presented for categorical variables; mean and standard deviation are presented for continuous variables.

N/n number of participants; **SD** standard deviation

Randomisation groups (1) lifestyle advice only; (2) lifestyle advice plus phenotypic CHD risk score information; (3) lifestyle advice plus phenotypic and genetic CHD risk score information

'Feeling down' refers to the question "During the past month, have you often been bothered by feeling down, depressed, or hopeless?" 'Anhedonia' refers to the question "During the past month, have you often been bothered by having little interest or pleasure in doing things?"

Assessed by multiple linear regression, reporting beta coefficients. Vigorous physical activity includes walking, cycling and sport. Sensitivity analysis: data below 5th/above 95th percentiles replaced with the values of the 5th/95th percentiles, respectively. All models are adjusted for baseline PA; the adjusted model is also adjusted for age, sex, randomisation group, marital status, income level, education level and occupation type.

95% CI 95% confidence interval; **h/w** hours per week; **N/n** number of participants

Assessed by multiple linear regression, reporting beta coefficients for objective outcomes; or logistic regression, reporting odds ratios for self-reported outcomes. Sensitivity analysis: data below 5th/above 95th percentiles replaced with the values of the 5th/95th percentiles, respectively, for continuous outcomes. The linear regression model is adjusted for baseline carotenoid level; adjusted models are also for age, sex, randomisation group, marital status, income level, education level and occupation type.

95% CI 95% confidence interval; **OR** odds ratio; **N/n** number of participants
