

Fig. F2:1 – Relative and absolute frequencies of silica skeletons from the coprolite and the residues from pots

Fig. F2:2 – Relative and absolute frequencies of silica skeletons from the floor, the courtyards and the structural fill samples

Fig. F2:3 – Relative and absolute frequencies of silica skeletons from the pit samples

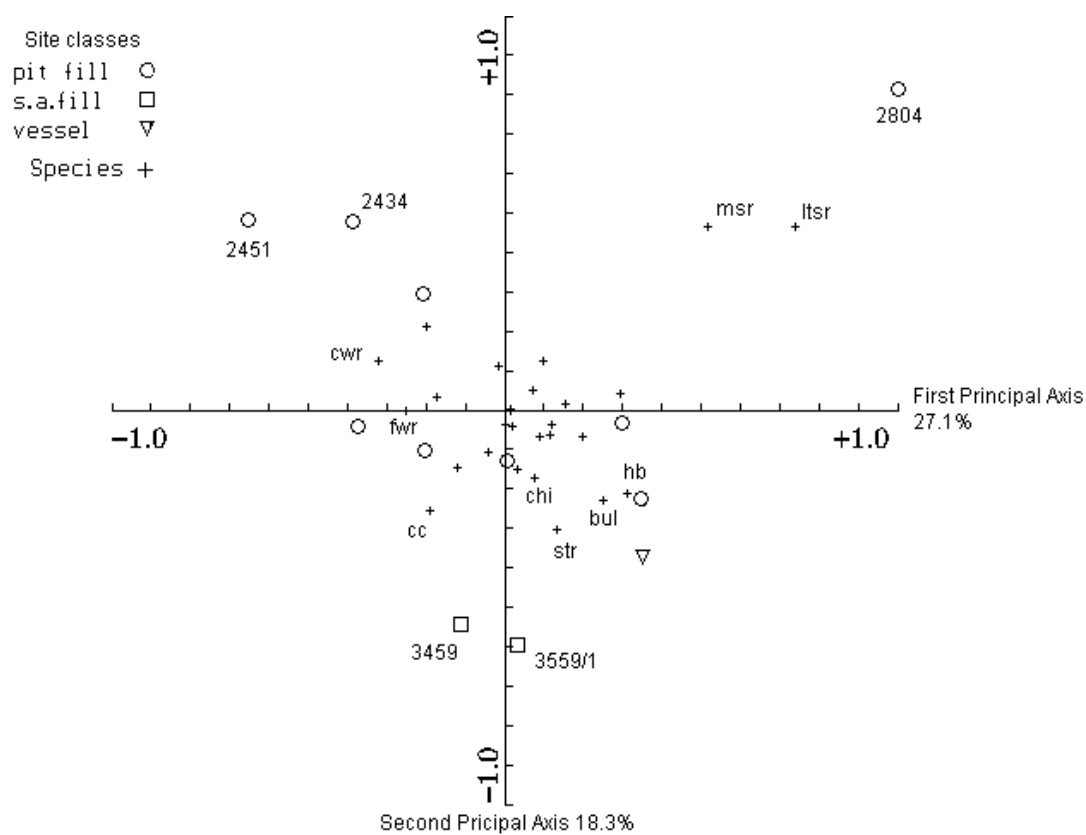

Fig. 2:4 – Correspondence analysis plot of the pit samples and two controls (3459=I14/102a and 3459/1=I14/102b). Almost 50% of the inertia represented on the two principal axes
