based on comparison of $\text{u} \text{ 'I'}$ with this postverbal $-\text{h} \text{ 'I'}$ ($\text{h} > \emptyset$ regularly in the history of Elamite) ¶¶ Dk. JDPa 108, Rnr. EL 76, 89-90, Paper RAE 93-7 ◇ The pK ($> \text{OG, G, Sv}$) syntax (at least in the past tenses) was ergative, the agens of the transitive verb being expressed by a noun in the agentive (ergative) case. This fact suggests that the agentive px. of 1s $*(\text{h})\omega-$ goes back to a N prn. meaning 'by me'. The existence of an etymologically identical 1s px. ($*\text{?}\nabla-$) in HS suggests that in the prehistory of HS there was an ergative period, with the ergative construction being predominant in the language, hence the prevailing verb structure with $*\text{?}\nabla-$ as the marker of 1s subjecti. But it is likely to have coexisted with a HS nominative construction, as far as one can judge from its scarce traces: [1] the verb yom-mi 'I am' / yon-ti 'thou art' in Kmb, the form of the dependent verb in Hd: 1s 'yó-m-o , 2s 'yón-t-o , ending $*-\text{m}\nabla$ / $*-\text{t}\nabla$ of certain tenses in HEC (going back to the analytic construction of a verbal noun + the aux. verbum substantivum $*\text{yon-mi} / *\text{yon-ti}$, *F AD PLOG 103-10*), suggesting that verbs with $*-\text{mi}$ as the subject ending of 1s (similar to and etymologically identical with verbs in IE and U) still existed in early pHS, [2] the accus. ending $*-\text{m}\nabla$ that survived in SOm, unlike in all other HS lgs., where its absence may be explained by the predominantly ergative syntax and where patiens (later accusative) is the unmarked actant of the sentence ("actant" in I. Mel'čuk's terminology). The preverbal position of the agentive subject markers in K ($*\text{h}^1\omega-$) and in HS ($*\text{?}\nabla-$) corresponds to the syntactic rules of pN: agentive pronouns do not occupy the post-predicative (sentence-final) position (as the N subject pronouns $*\text{mi}$ 'I' and $*\text{t}^1\text{ü}^1 / *\text{s}^1\text{ü}^1$ 'thou' do), but are placed before the predicate (as all object words do). In apparent contradiction to this rule, the pIE stative marker of 1s $*-\text{x}\epsilon$ and the other abovementioned pIE endings of 1s follow the verbal stem rather than precede it. The contradiction can be explained away by supposing that these IE verbal forms go back to a pre-IE analytic construction of a verbal nominal + a prefix-conjugated aux. verbs (as in C) ◇ The N vw. $*-\text{o}-$ is reconstructed on the ev. of K (pointing to a labialized vw.) and IE ($*-\text{x}\epsilon$ rules out N $*\text{u}$ and $*\text{ü}$) ◇ For ffd. *see AD PP 67-74, 82-7, 93-103, 112* ◇ \neq Gr. I 67 (connects IE $*-\text{H}$ of 1s with "EurA" $\text{K} \text{ 'I'}$ $> \text{Hg. -k}$ 1s, etc.).

823. $*\text{h}_1\text{u}_1\text{w}_1\hat{\text{c}}\nabla$ (or $*\text{h}_1\text{u}_1\text{w}_1\nabla\hat{\text{c}}\nabla$) 'loins, lap' $>$ HS: WS $*\text{h}_1\text{u}\hat{\text{c}}\text{an-}$ id. $>$ Hb ḥoçen 'fold of garment, bosom', Amr {G} $\checkmark \text{ḥṣn}$ v. SJ 84 || A: T (after vowels) *-g, (after cnss.) *-ug / *-üg 'thy' > OT (after vowels) -ɸ / *-g, (after cnss.) -uɸ / -üg / *-iɸ / *-ig, Az Δ -ɸ / -ɸ / -uɸ / -üɸ ~ -w / -uw id. (gen. göz-üɸ-ün 'of thy eye', baba-ɸ-in 'of thy grandfater', accus. aɸ-uw-i 'equum tuum'), Chv L -u / -ü. The Chv sx. -u / -ü may go back only to rounded allomorphs *-ug / *-üg, hence I am inclined to assume that the OT unrounded allomorphs *-ig / *-ig are secondary. They are due to labial harmony of vowels, which is

a rather recent morphophonemic phenomenon. Acc. to Tekin GOT 63, "in Orkhon Turkic the labial harmony is at its first stage of development". Side by side with the allomorphs **-g / *-ug / *-üg*, there are nasalized allomorphs **(u/ü)ŋ* (~ **-iŋ/*-iŋ?*). In OT we find both unnasalized and nasalized variants of the *sx*. In most later lgs. of the NaT branch, the allomorph **(-∇)ŋ* is the only one in use. Acc. to Bz. Tsch 726-7, the nasalized variant is represented by the Chv optional allomorph *-ɲn-*, used in the oblique cases side by side with the usual **-u/*-ü*: the genitive *-ɲn-ɲn* 'of thy ...' alongside with *-u-n*. This suggests that Chv reflects the pT distribution: the allomorph **(-∇)ŋ* was originally used in the oblique cases only, and it may be conjectured that it resulted from nasalization of the *sx*. **-(u/ü)g* by the adjacent genitive ending **-n* ¶ CafD A 302, Kon. 'sour milk, curds' > Tu κουαρυ id., nir-kuγelъ v. 'curdle, coagulate', Gnd korop & korrop & kurrop & korrup 'buttermilk' ¶ D #2162 ◊ The cnss. *-t- (in IE, Prm, B), *-z- (S), *-s- (M), and *-pp- (D) are likely to go back to the second elements of N cds. (some of them functioning as derivational sxs. in the descendant lgs.) ◊ From the history of culture we may infer that this N word was originally applied to coagulating blood, to fat, to meat, and possibly to food made of corn, but only later (in the independent neolithic history of IE, HS, and D) it was applied to milk ◊ BF (or FU?) *a may be due to partial contamination with N *kaR₁∇₁?∇ 'peak, rock, steep mountain'. The existence of the N internal vw. (*∇) is suggested by D *-r̥- (< N intervoc. *-r-) ◊ An alt.: two N etyma: [1] N *k'ü'R∇ 'fade, rot, decay' (> IE *g̃er-, Sv -kwer, WCh: Jmb ḳə̀̀wá 'decay, rot') and [2] N *kU|ar₁u₁wa 'coagulate, get sour\rancid' (all the rest).

I 217-24 ("interrogative K" in IE, U [including Y], A, Ai, ChK, EA + unc. Gil) ◇ Acc. to IS's hyp., **ḲE* is a Uralo-Altaic innovation, a variant interr. word based on the analogy of the dem. particles/pronouns. The opposition of the N iste-deictic **h'e'* 'this' (≈ IS's **ʔi* / (?) **ʔe*) vs. pronouns with back vowels (e.g. N **ha* 'ille') was introduced into the system of interr. pronouns, so that alongside with N **Ḳo* 'who?' a new hic-deictic inter. prn. **ḲE* 'wer hier?' appeared. Starostin, A. Dybo, and Mudrak try to unite the A reflexes of N **Ḳo* and **ḲE* by reconstructing pA **k'a_{ly}* (SDM97 s.v.), which is not a good solution, because the difference between N **Ḳo* and **ḲE* has survived not only in A, but also in U. The variation **e* ~ **ä* ~ **i* in the U and A lgs. is still to be explained.

('грязь'), Ud $\text{o}\check{n}\check{c}$ to 'sand', Ork $\text{xon}\check{c}$ to 'grain of sand', $\text{xon}\check{c}$ to 'sand' ¶ STM II 20 \diamond The original affricate may have been $*\check{c}$ (if the G word is a loan from Zan, which presupposes a pK rec. $*k'\nabla\eta\check{c}$ -). The cns. $*\eta|\check{c}$ changed into m in Bnc, into $*n$ in K (as. $*\eta\check{c} >$

nC), and disappeared in most other descendant lgs. (∇η|ńĉ > *∇ĩĉ > *∇C). In the prehistory of IE the original cluster *-^hη^hĉ- is likely to have changed into *-ńĉ- (regr. as.) > *-j̥s- (N *ń > IE *j̥ regularly). An alt. rec. is *k̥Emĉ∇, which is less probable in the light of Tg *xone∇. The cause of the de-emphatization in pre-IE (N *k̥- > *k- [> IE *ǵ]) or the voicing in IE (**k- > *ǵ-) is still not clear. The unexpected Tg *o of the first syll. still needs explaining (regr. as., as suggested by Orc ońokto, Ud ońokto, Ork xoneoxu and xoneokto?).

103 || J: pJ *kapa 'skin, leather; bark' > OJ kàpà, J: T kawá id., Kg kawa, Ns kó, Sh kã, Yka id., K káwá 'skin', kàwá 'leather' ¶ S AJ 258 [#3], 26 [#3], S QJ #3, Mr. 445, Kenk. 880 ¶¶ S AJ 274 [#2], SDM95 s.v. *k'ápa 'bark, skin', DQA #988 (A*k'ápa 'bark, skin') ¶¶ Acc. to DQA #1007, the A √ has a variant *k'èp'à ({SDM-95} *k'èp'o) 'husk, shell' > pJ *kàpì 'egg, shell', T *k'ebük 'bran, chaff' anf M *kebe 'bran, husks'. These two variants may represent two different results of synharmonic levelling, suggesting the existence of a front vw. in the second syll. of the N word ◇ The presence or traces of a rounded vw. (*o?) in U and Ch as opposed to the presence of *a in A and C may be explained by assuming a trisyllabic etymon with both *o and *a. This hyp. is directly suggested by Su k^waɣap 'bark' and indirectly by the long vw. in T *k'āpuk. In view of Su k^waɣap the etymon *Қон₂ар'U' is preferred to *Қаһ₂ор▽ ◇ IS MS 344 (ᵛᵛᵛᵛᵛ 'bark'); IS proposed to equate U *kopa 'bark' with M *qobuɣa 'well bucket (usually made of skin)' (MED 950, KW 191) and with ET qobuq, qobuzaq 'bark' (which is a labialized var. of pT *k'āpuk 'bark'). His rec. of *ᵛᵛᵛᵛᵛ- is based on comparison with K *ᵛᵛᵛᵛᵛ-/ᵛᵛᵛᵛᵛᵛ- 'skin, fell', which is hardly acceptable (≠ϕ). The Ag *-pp- and the cns. *-ᵛᵛ- in some Ch lgs. may be explained by the presence of a N lr. (*ʔ or *ɣ). The rec. of this lr. will help resolving the contradiction between the ev. of U *-p- (suggesting N *-p-) and that of A *-p' (apparently suggesting N *-p-, but also explainable from *-ʔp- → *-ɣp-). In T *kāpuk and possibly in Ch (Sy Z kóbɜk) one may discern traces of a suffixed element. There is an interesting parallel between M *qaβ'urqay and ECh (Kwn kábárów, Smr kàbɜráw 'bark') ◇ ≈ AD NM #93 (*Қа'p|ʔ'ᵛᵛᵛᵛᵛ), S CNM 5, Vv. AEN 6.

DJ 106-8 || M *-ma- in the accus. and other

oblique cases of pronouns: M *²ci-ma-yi 'thee' (originally accus. *²ci-ma 'thee' + nominal accus. *-yi that was added by analogy [see s.v. N ? *h∇ya 'for']) > MM ²imaiyi, WrM cimai, etc., M *i-ma-yi 'him' accus. (demonstr. *i + accus. *ma + M nominal accus. *-yi). The prehistory of these forms may be reconstructed as follows: N *²t'ü' mA 'thee' (= *²t'ü' 'thou' + *mA accus.) > ppM *t'ima 'thee' > pM *²ci-ma-yi 'thee', the form *²ci-ma- being generalized as the stem of the oblique cases, whence the dative *²ci-ma-dur, the ablative *²ci-ma-ča, etc. ¶ AD PP 78-9, Pp. IM 209-14 ¶¶ Mng. JA 11, 14 || ? D *-n (if from *-m), accus. case ending > Kt -n, Td -n, -n, OKn -a(:)n, Tulu -nɔ, OTI -n (-v), -i n (-i v) - n u, Klm -(u)n, Prj -(i)n, Gdb -(i)n ~ -(i)ŋ, Knd -ŋ, Png -iŋ, Krx -in, -an, -an, Mlt -e(n), -i(n). Traces of the former ending *-m may be discerned in OKn accus. ending -am ¶¶ Zv. CDM 27-30, MhS 165, Shanm. DN 370-1, Ktl. G 43, Gai 42, An. SG 202-5, Rmn. OT 191 ◇ IS II 48-51 (*-mA > IE, U, A, D), AD PP 92, Mng. MP 21-36, Coll. IUS 21, Coll. HUV 130, Ivn. VNZN 148 (on the original analytical status of this accus. ending), Gr. I 129 (IE, U, A, incl. J). I am grateful to Blz. for drawing my attention to the Om cognate. In IE the nouns of the non-animate (neuter) gender do not distinguish between nom. and accus. (and hence have no accus. ending), because there is no syntactic necessity for it: nouns of the non-animate gender do not usually appear as subjects of a trans. verb, therefore in sentences with trans. verbs they always function as their object. In other words, in IE (as in many lgs.) the marker of accus. is used only when it is necessary for syntactic distinctions. It is a trace of an old N syntax that had no obligatory grammatical categories (unlike in later IE lgs. with their grammatical categories of compulsive usage - even when not necessary for communication). In F the morpheme of accusative is not used after the imv., which reflects the same original situation: the form is not used wherever the syntactic function (object of the verb) is obvious from the context. In Sm and Tg this case marker denotes a definite object. All this suggests that originally N *mA denoted a marked accusative.

IV 487, D #4743, Pf. 194 [#184] ◇ AD GD 2 (HS, K, IE), IS II 56-7 (*mä prohibitive in HS, K, IE, D, A), Gr. I 213-4 ("negative M" in IE, T, ?? Ai). ◇ In IE, K, D (Gondi), Irq, and M the particle functions as prohibitive, in Ar it is negative (of the indicative mood), while in C, Ch, and T it is used in both functions, so that we have no definite ev. to determine which of the two functions was primary, though it seems preferable to suppose that originally it was prohibitive. The length of the vw. in Ar, NaIE, K, M, and D (Gondi) suggests the presence of a lr.; the only lr. that may have been lost in S is *h, hence we tentatively reconstruct a *h of the second syll. (suggested also by the Ar reduplicated verb ✓ mhmh). The ev. of most lgs. suggests the vw. *A (sc. *a or *ä) of the first syll., but M points to a front vw. (probably *ä). The labialized vw. in M *bū and in the Sv variant mō, mōd(e) point to the infl. of a labial factor (final *o?), but the IE e-coloured lr. *h̄ (for the expected labialized *h̄^ω) still needs explaining.

C: HEC *-m∇, verbal ending of 1p > Sd -mo, Hd -mo, -miya, Hd Lb -mina, Kmb, Alb -mi ¶ The ending may go back either to N *mi ?a or (acc. to Blz.) to the HS *(?an)muni 'we' with *-muni as a compound form parallel to the 2p *(?an)tun∇ 'ye' ¶¶ Blz. PPCh1 1-4 ¶¶ IS II 53 tried to adduce here the Ch pers. prn. of 1p incl. *mun (reconstructed by IS as *m(n)). But in the light of Chadic comparative ev. and the existence of the Ch prn. *kun 'ye' it is more likely that Ch *mun is a pCh (or pHS) innovation based on *m (1 person) + *-un (pl. ending). The pCh system may be reconstructed as follows:

	sing.	pl.
1 pers.	?	*mun∇
2 pers.	*ku (2m)	*kun∇

This suggests a prn. of 1s *m∇ (< N *mi [q.v.]) and the composite origin of Ch *mun∇ 'we' incl. ¶¶ Blz PPCh, Kr. RChP, Brq. PS, AD EPCChL || D *ma-~*mā- 'we' excl.: > Tl mā- ~ man- obl. 'we' excl., ma-namu / obl. mana- 'we incl.; Gnd mā- obl. 'we' excl., Knd mān / obl.

mā- 'we' (no opposition incl. ↔ excl.), Kui, Ku mā- obl. 'we' ¶ An. DJ (table 10 after p. 60), D ##3647 and 5154 ◇ Cf. N *ʔa, pc. of plurality ◇ ≈ IS II 52-6 (*mä, 1p incl.) ◇ Unlike IS, I do not believe that this prn. (N *mi ʔa) was originally specialized as either incl. or excl. In M and Tg it was opposed to the inclusive M *bidanu and Tg *miti ~ *minti (both from N *mi t'ü' 'I + thou' and *omi nu t'ü' 'I + genitive pc. + 'thou') (Pp. IM 220, MED 102, Bz. 107, STM I 539) and therefore acquired the meaning of an exclusive 'we'.

1354b. *mi t'ü' 'we' incl. (N *mi 'I' + N *t'ü' 'thou') is found in M, Tg, Gil, and probably in Y: A: M *bida (~ *bide?) 'we' incl. > MM bida, WrM bide ~ bida, Ord bida, Dg {Pp.} báda id.; in most modern lgs. the opposition excl. ↔ incl. has been lost, so that the extant forms mean 'we' without this opposition: HIM Бид, {Pp.} bid:a, bʔadda, Brt Бидэ, {Pp.} be'dé, Kl bidə and Бидн (< gen. *bida-nu), Mgr {Pp.} buda; gen.: *bida-nu > MM bidanu, WrM bidan, Dg bádanī 'our' incl., HIM {Pp.} bidnī ~ biddānī 'our' ¶ The final *-a is on the analogy of M *ba 'we' excl. (< N *mi ʔa) ¶ Pp. IM 215-7, Pp. MA 118, MED 10, KRS 97, SM G 36-8 || Tg *m|biti (gen. *minti) 'we' incl. > Ewk mit(i), Sln mīti, Lm mut, Neg bitta ~ bit, Orc biti, Ud minti, WrMc muse (-s- on the analogy of si 'thou' or a trace of the ancient N [regional?] var. *mi s'ü' 'we' incl.?) ¶ *-n- in *minti is from N *nu genitive, but the detailed history of the form is not yet clear ¶ Ci. 270-1, Bz. 1057 (Tg *münti 'we' incl.), STM I 539 || **Gil:** Gil A mer ~ mir 'we' incl., Gil ES mirn ~ mern id. TS 34). If it belongs here, its

*ī may be accounted for by regr. as. caused by the N vw. *i of the second syll. IS reconstructs the N etymon as *māyṛ∇, which is based on an untenable rec. of the Tg √ with *ay. Closer examination proves that there is not enough ev. to reconstruct here a cns. *y. The only apparent ev. is the diphthongoid ^he in Lm in the verb m^herān- v. 'marry' (of a woman) and in the related Lm nouns m^herān 'marriage (of a woman)' and m^herānnə 'bride' (STM I 538-9, LW 690-1). But acc. to the sound laws established in Tg historical phonology (Ci. and Mng. TS), the Lm diphthongoid ^he goes back not to the pTg diphthong *jā (which, acc. to IS, goes back to N *ay), but to the pTg vw. *ī, hence the Tg verb in question must be reconstructed not as *mjār∇-, but as *mīrə-n- to 'marry' (of a woman) (whence the abovementioned reflexes in Ork, Ul, Ewk, and Lm) (F Ci. 109, Mng. TS 34). As to the Tg diphthong *jā, it regularly yields quite a different vw. in Lm, namely ^hæ (sc. æ with palatalization of the preceding cns.) (Mng. TS 34) ¶ ≠ DQA #1305 (A *mjār|ṛā 'male, mature': unc. comparison of the Tg √ with pJ *mārā 'penis') ◇ IS II 39-40 (#277) (N *majra 'young male') ◇ ≈ Gr. II #63 (*mer 'child') (IE, U, Ai).

In spite of the long *vw.* in U and A, IS preferred to reconstruct a monosyllabic etymon, because a bisyllabic form "would have contradicted the typical monosyllabic structure of the non-autosemantic stems (незнаменательные основы)". But the monosyllabicity of pronouns and other non-lexical words in the attested lgs. is not necessarily due to their original shape, it is often due to the universal diachronic tendency of their shortening (e.g. *L ecce iste* > Fr *ce*, *L illōrum* > F *leur*, Sl **azь* > R я 'I', AS *tōweard* > NE *toward* [tōd], pS **šuʔa* > BHb *hū* 'he', etc.). In the light of the extant ev., IS was right in supposing that this prn. did not take part in the distance opposition *hic* ↔ *ille*, so that the *hic*-deixis of the prn. in T and the *ille*-deixis in FU must have developed within these descendant lgs. due to the opposition to other dem. pronouns.

(possibly 'hawk, falcon'), ?σ Ar **نَصَة** *naṣṣ-at-* 'female sparrow'; OHb fem. ***neç'čā** (> ***niç'čā**) 'female falcon' (Job 39.13) was transcribed in LXX as *νεσσα* and translated by Aquila as *ἰέραξ* and by Hieronymus (Vulgata) as *accipiter*, while the Tiberian Masoretes read (and vocalized) the word as **נַחַשׁ** *nō'čā*, interpreting it as a wrong spelling for **נַחַשׁ** *nōčā'tah* 'its (= stork's) feather' (**נַחַשׁ** in their "Masora parva" comment) within the context **חַשׁוֹן** *hāsī'dā w nōčh* which they understood as 'stork and its feather', while acc. to Aquila and the Vulgata it meant 'stork and (female) falcon'. This Masoretic misinterpretation is responsible for the strange vocalization (with unexpected *ō* and lack of gemination of *ç*). KB 676 preserves the traditional Masoretic vocalization as **נַחַשׁ** *nō'čā*, but accepts (after G. Hölscher) the semantic interpretation of **נַחַשׁ** *nōčh* as 'female falcon'. The LXX translators were probably not sure about this difficult place and preferred to transcribe it (instead of translating) as *ασιδα καὶ νεσσα*. The vw. of the first syll. of the word is not clear: both its Tiberian and Babylonian vocalization of BHb point to pS ***i** (***niçaç-**), while SmHb and Ar suggest pS ***a** (***naçaç-**) ¶ KB 674, 676, KBR 714-5, Hölscher H 99, Yv.
