LIST OF NOSTRATIC ENTRIES AND OF INDO-EUROPEAN ROOTS

Introduction: Alphabetical order of entries. The alphabetical order of consonants is as follows: *ʔ (incl. *ʔ), *ɸ (incl. *ɸ), *b, *c (incl. *ć, *ĉ, *č, *C), *ç (incl. *ć, *ĉ, *č, *C), *č, *č, *ĉ, *ĉ, *g, *g, *ɣ (incl. *Γ), *h, *H (incl. *H, *H₁, *H₂), *ħ, *k (incl. *K, *k), *k (incl. *K), *l (incl. *l, *l̄, *L), *l̄, *m, *n (incl. *n̄, *n̄, *n̄, *N), *n̄, *n̄, *p (incl. *p̄, *P, *P̄), *q (incl. *Q), *q, *r (incl. *R), *r̄, *s (incl. *ś, *ś̄, *ś, *ś̄, *S), *š, *š̄, *t (incl. *T), *t̄, *w, *χ (incl. *X), *y, *z (incl. *z̄, *z̄, *z̄, *Z), *ž, *ž̄, *z̄ (incl. *z̄, *z̄, *z̄, *Z), *ž, *ž̄.

Among the word-medial consonants we distinguish between "weak consonants" (*ʔ [incl. *ʔ and *ʔ], *ɸ [incl. *ɸ], *g, *ɣ [incl. *Γ], *h, *H [incl. *H, *H₁, *H₂], *ħ, *q, *χ [incl. *X], *w and *y) and "strong consonants" (all others).

The entries are arranged as follows:

[1] The basic arrangement: according to the initial consonants and the first word-medial strong consonants. If there are no strong Inlaut-consonants, the weak consonants (according to their place in the alphabet) are taken into account instead.

[2] Within each group of entries with the same initial cns. and the same medial strong consonant the entries are arranged as follows:

- (a) first those without any additional consonants,
- (b) those with a weak cns. preceding the word-medial strong one,
- (c) those with a weak cns. following the word-medial strong one,
- (d) those with a third strong cns.

If in a N etymon in the medial position (Inlaut) there are two weak consonants and no strong one, the priority of one weak consonant over the other (as criteria for alphabetical order) has been established according to the fate of these consonants in daughter languages. For instance, in N *kAħw∇ 'seize, grasp, hold' the consonant *w has survived in Kartvelian and Dravidian, while the laryngeal was lost, therefore the entry was placed among the *k-w-entries.

[3] Within each group of entries with identical consonants the entries are arranged according to the first vowel. Order of vowels: *a (incl. *A), *ä (incl. *æ), *e (incl. ê and *E), *i, *o (incl. ô), *u (incl. *U, *û, *î, *â), *ü, *∇.

The entries with consonants of doubtful identity (those within the brackets []) and of doubtful presence (those with the brackets [_]) are treated as those with regular consonants. The optional second element

of a N word (that within plain brackets ()) is not taken into account in the order of the entries.

The signs "(₁?)" and "(₂?)" mean that among the compared roots of the descendant languages only one (in the case of "₁?") or only two (in the case of "₂?") may be considered certain. If two language families are compared, their presumably common N etymon (although not certain) may be preceded by "? ₂".

**PHONETIC SYMBOLS
and OTHER SIGNS
USED IN THE ETYMOLOGICAL ENTRIES**

Generalities. § 1. In my papers I distinguish between transcription (rendering the phonemes and allophons of the language in question) and transliteration (rendering the characters of the original script). For transcription (as well as for reconstructions) a unified transcription script is used: a, b, c, d, e, etc., while for transliteration (as well as for rendering the original Roman spelling of the language in question and for literal quoting of other scholars in their own notation) a special transliteration-quotation script is used: a, b, c, d, e, etc. Wherever it is necessary to distinguish between phonemic and phonetic transcriptions, the former is denoted by solidi (slant lines) and the latter by square brackets, e.g. Nen F /mañ/ [mäñ] 'I'. Morphophonemic transcription is denoted by broken brackets [], e.g. Old Indian spaṭ (spaś-s) 'beholder', Kota tot (tols) 'full year, anniversary'. These brackets are used also when a morphophoneme is phonetically reduced to zero: Rf

Tm θamϣā(r)^θ 'woman', uǰu(r) 'to go'. For Oscan, Umbrian, Gaulish, Punic and other languages of the I mill. B.C.E and the early I mill. C. E. (as well as for Guanche) a special script (font) "A, B, C, D" is used for the original Latin alphabet of the sources (capital letters), while the transliteration script "a, b, c, d" is used for rendering the Oscan, Umbrian and Phoenician alphabets. "EM:" means "E-mail equivalents" (used by me and some of my colleagues in E-mail). But for proper names of these languages (e.g. Gaulish) (if preserved in Latin sources) the usual spelling with capital and small letters of the "transliteration script" is used (e.g. Gl Remos).

A special sign: The sign ∂ (before the symbol of the source) indicates that the transcription of the author in question is indicated with Dolgopolsky's modification (interpretation). This sign before the semantic definition means that the definition is reformulated rather than quoted word by word.

§ 2. The transliteration is either traditional (for languages with long scholarly tradition of transliteration, such as Old Indian, Avestan, Gothic, etc.) or partially approaching our transcription system (e.g. for Egyptian we use z, s, ħ, ʁ, ʁ, c and ʒ instead of EG's s, ś, ħ, ħ, ħ, t and d respectively, for the ancient Semitic languages we use ħ, ʁ, ʁ, θ, δ, θ and ê instead of the traditional ħ, ħ, ġ, t, d, z and d of the Orientalistic transcription; Arabic ta-marbuta ö is transliterated as ħ (but transcribed as -at-). For Tamil, Malayalam, Kannada and Telugu we use the traditional indological transliteration. The sign āytam of the Classical Tamil script is reproduced as ∴ (for its meaning cf. MeenS HTL 53, 68-72 and An. GTJ 11). On Coptic see below **Transliteration of Coptic Letters**. For Classical Armenian I usually use transcription script, but in words with letters and digraphs of controversial reading (t ê, o ô, ħ i ω) the transliteration is preferred.

The sign · precedes translations quoted from a glossa or from an ancient\medieval dictionary (e.g. Gk.[Hs.] ἰορούα· χορδή 'gut(s)', Pru [El.] alnē· "Tyer" 'beast', i.e. Pru alnē·, translated in Elbing's dictionary (≈ 1400 C. E.) as Tyer 'beast'). If the quoted translation (e.g., of Prussian, medieval Celtic lgs.) is in Latin script, it is printed here with the "Geneva" letters (a, b, c, d, e, f, g, h, i, j, k, l, m, n, o, p, q, r, s, β, t, u, v, w, x, y, z) within quotation marks " ".

§ 3. For some languages a kind of super-dialectal transcription or transliteration has been used. In transcribing Arabic, the sign ġ is used to denote a phoneme (spelled as ġ) pronounced [g] in Northern Egypt,

[ǧ] in Sudan, [ǰ] and [ǰ̣] in the rest of the Arab world. For Syriac a super-dialectal transliteration is used combining the vowel distinctions preserved by West Syriac dialect and script (vocalization signs) and lost in East Syriac with the distinctions preserved in East Syriac script only. Thus, the sign ē is used for a vowel preserved as ē in Sr E and changed into ī in Sr W, while for the vowel pronounced e in Sr W ("rəbāṣā") the sign ε is used here. The sign ā denotes the vowel ā of Sr E and o ("zəḵāpā") of Sr W.

For New Persian I prefer the transcription of B. Miller and V. Rastorgujeva to the traditional one. The new transcription reflects the transformation of the former quantitative opposition of vowels into a qualitative one, but still with preservation of the vowel length ($\bar{a} \leftrightarrow a > \bar{u} \leftrightarrow \bar{ä}; \bar{i} \leftrightarrow i > \bar{i} \leftrightarrow e; \bar{u} \leftrightarrow u > \bar{u} \leftrightarrow o$), so that traditional ā, ī, ū, a, i, u have changed into ā, ī, ū, ä, e, o [cf. Rast. GPJ 616-70]; EarNPrs ē (spelled as ī) > NPrs ī (loss of the EarNPrs opposition ī ↔ ē).

§ 4. No distinction is made here between fricatives and spirants (in Martnet's terminology: NE th in this is a fricative, while Sp d in nada is a spirant [Mart. DPh § 2.21, TBC 39-42]). Although this distinction is phonetically justified, the sources usually do not distinguish between them, so that without direct observation we are unable to draw conclusions in this respect. Wherever possible, we can denote the spirants by an underline below a letter for fricatives: Sp nada [¹naḏa]. If the spirants are very weak, we use a superscript letter (ʕ in Rif Berber, ʕ̣ in dialects of Vogul).

§ 5. In our transcription we usually do not distinguish between two types of hushing sibilants: apico-alveolar and predorso-alveolar (for lack of information about it in the description of languages and in dictionaries, as well as because no phonemic opposition is involved).

§ 6. Reconstructions of proto-languages are given either in the unified transcription (as described below), or in transliteration script a, b, c, d (if reconstructions of other scholars are quoted in their own notation). If a proto-language (e.g. pA, pM, pD) does not distinguish between orders of affricates, I transcribe them as ċ̣ (for traditional pA and pM č̣, pD c̣) and ċ̣̣ (for traditional pA and pM č̣̣ or ĵ̣, pD j̣), in order to avoid unjustified identification of the affricates as hushing (č̣, ĵ̣) or hissing (c̣, ʒ̣). In pT and pTg the phonemes usually interpreted as j-, č̣, Tg ĵ̣ are likely to be (in my opinion) palatal stops, therefore I transcribe them as j and ç. The pFU and pU phonemes *č̣̣ and *-č̣̣- (of the FU

transcription) are lateral fricatives and are transcribed as \hat{s} and \hat{z} . But the phonetic nature of the pU and pFU initial $*\delta$ - remains obscure (it cannot have been a voiced obstruent), therefore I transcribe it by a special sign λ .

§ 7. I am aware of the trouble that my symbols (not found in regular computer fonts and in printing offices) may cause to those willing to quote from this dictionary. Therefore I propose quotable equivalents for the my symbols. In this list they follow my symbols and are marked by the sign "Q".

§ 8. In the following lists of symbols we do not include obvious symbols based on Latin letters (such as b, d, t, a, o, etc.).

§ 9. Those colleagues who cannot print subscript and superscript characters (in quotable equivalents of my transcription) may replace them by letters in italics (e.g. c_2 for c_2), which is a less desirable option.

I. In pN reconstructions

 # - word boundary

II. In PIE and NaIE reconstructions

Here the traditional notation of the IE comparative linguistics is used, with the following exceptions:

in the aspirated consonants the sign of aspiration is a superscript ^h rather than h (*b^h, *d^h, †*g^h·†*ĝ^h, *g^{wh}, *p^h, †*t^h, †*k^h, †*k̂^h, †*k^{wh} for the traditional *bh, dh, etc.). Q: ^h

*ɥ instead of the traditional *j or *i̯. Q: ɥ

*ʷ instead of the traditional *u̯. Q: ʷ

*i̯ and *u̯ as glides of diphthongs instead of the traditional *i and *u (e.g. *e i̯ for the traditional *ei, *e u̯ for the traditional *eu, etc.). Q: ɥ, ʷ

In quotations (Q) the sign of palatality $\tilde{}$ may be replaced by $\text{\textcircled{6}}$ (e.g. $\tilde{g}^h = \text{\textcircled{6}}g^h$, $\tilde{g} = \text{\textcircled{6}}g$, $\tilde{k} = \text{\textcircled{6}}k$)

The pIE laryngeals are denoted as follows:

h - "weak" (yielding zero in Hittite) a-colouring laryngeal (\approx Pv.'s *A₂) (pIE *eh > NaIE *ā). Q: h

h̄ - "weak" (yielding zero in Hittite) e-colouring laryngeal (\approx Pv.'s *E₁) (pIE *eh̄ > NaIE *ē). Q: h₆ (or h^y)

ʔ - a "weak" (yielding zero in Hittite) laryngeal, lost in zero-grade of apophony (unlike all other laryngeals, that yield NaIE *ə in the apophonic zero-grade). Q: ʔ

T - an archiphoneme resulting from neutralization of the opposition *-d^h ↔ *-d ↔ *-t. Q: T

ə - schwa in NaIE. Q: e₃

◦ - non-phonemic vocoid (schwa secundum) in proto-IE. Q: e₅

‘ (in pIE and pNaIE reconstructions) = the prosodic feature (breathed voice, some kind of word-initial devoicing?) that brought about Gk prosthetic vowels, transformation of IE *w- and *y- into Greek h- (cf. Introduction, § 2.2.6). Q: ’₃

If the neutralized opposition is between phonemes denoted by different letters, we may use /, e.g. p/b.

DIACRITICAL SIGNS

(1) WITH CONSONANT LETTERS

Superscript consonant letters are always used to denote weak consonants (θ , ϑ , \tilde{h} , \aleph , etc.). The superscript letters θ , r denote extreme reduction of a consonant, like in some dialects of Rif Berber: $\theta am\vartheta\bar{a}r\theta$, $\theta am\vartheta ar^{\theta}$ 'woman', $iff\bar{a}\vartheta$ 'he went out'. Q (the quotable equivalents of these signs) is formed by adding 0_1 or $+0_1$ after the letter: $\theta = Q: t_{9+0_1}$, $\aleph = \aleph_{0_1}$.

Reduction to zero is denoted by using morphohonemic brackets $()$: $\theta am\vartheta\bar{a}(r)\theta$ 'woman'. If a superscript consonant letter is adjacent to a letter for a homorganic consonant (e.g. in affricates: $k\aleph$ in Vg dialects), it denotes a weak consonantous elements of an affricate.

Subscript consonant letters (e.g. in Lp Kld $v\mu\alpha\lambda\lambda a\delta$) denote very weak consonants. Their quotable equivalents are formed by adding 0_2 or $+0_2$ to the corresponding character: $v = Q: v_{0_2}$, $\delta = d_{9+0_2}$.

· (\dot{s} , \dot{t} , \dot{b}) - glottalization (both ejective and voiced injective), including preglottalization. In the N reconstructions it denotes an emphatic articulation (without commitment as to its exact phonetic articulation: glottalization, aspiration or tenseness). EM: · (after the letter). Q: " after voiceless consonants, " before voiced consonants (e.g. $\dot{s} = Q s''$, $\dot{t} = Q t''$, $\dot{b} = Q b''$)

' (preceding the letter) - preglottalization (as Sq 'r, 'h, Lp Δ 'p, 't) or injective glottalization (especially of voiceless consonants: 'p, 't). Q: " before a cons., e.g. 'h = "h₂

◦ (after the letter) - tense non-aspirated (in the NrCs languages, in Zng).

¹ (after the letter: b¹) - unreleased stop (stop without explosion, as in Vietnamese and Ndam); cp.] = unreleased undiscriminate stop (see above). Q:]

◌̣ (\underline{d} , \underline{z} , \underline{t}) - uvularization ("emphasis", as in Arabic and Berber). Q: 12 or +12 after letters for consonants

ɟ̣^ɸ - voiced lateral click,

m^ɸ - nasalized bilabial click,

n^ɸ - nasalized addental click,

ɲ^ɸ - nasalized palatal (palato-retroflex) click,

p^ɸ - voiceless bilabial click,

t^ɸ - voiceless addental click,

ṭ^ɸ - voiceless alveolar click;

aspirated and glottalized clicks should be represented by adding the signs of aspiration and glottalization to the symbols for clicks (e.g., t^{ɸh}, ç^{ɸh}, ṭ^ɸ, ç̣^ɸ); retroflex clicks can be designed by adding the sign of retroflexity to the signs of addental clicks: ṭ^ɸ, ḍ^ɸ, ɲ̣^ɸ).

The clicks are rare in African languages of Nostratic origin (in some South Cushitic languages only). Nevertheless in view of further research of languages of Africa I find it useful to formulate my proposal of transcription of clicks.

(2) WITH VOWEL LETTERS

~ denotes nasality: ã = nasal a; in the Slavic languages nasality is denoted by a cedille: ạ = ã. EM: ~ (after the letter)

ç denotes retroflex articulation (as ʃ̣ in Chinese ɕhi, ri, or ʒ̣ in American English ḅirɔ [ḅʒ̣ɔ])

̣ denotes apical pronunciation: ɨ̣, ụ = apicalized i, u (as ɨ̣ in some East Lapp subdialects denoted in Sotavalta's and Wiklund's transcription as ɨ̣, ụ, or as ɨ̣ in Chinese ɕi).

˘ (over the letter) denotes middle pharyngealization (as in some Daghestanian languages; such pharyngealization is supposed to have existed in the history of Akkadian) and pharyngealization of vowels in

Tuva and Tofalar. NB: $\dot{\text{I}}$ is a pharyngealized I (Tv ЫӢ), while $\dot{\text{i}}$ is a pharyngealized i (Tv ИӢ). EM: I (after the letter).

ʔ and H (before the letter or between vowel letters) denote "interrupted" and "aspirated" vowels (in Ud, according Zinder and Matusевич) (the sign chosen in accordance with the source: H if the source indicates a kind of h); Krm. treats this "interruption" and "aspiration" as phonemes ʔ and h (transcribed so in quotations from Krm.)

'^{h} (a'^{h} , e'^{h} , etc.) - breathy vowels (vowels with breathy voice) and "lax" vowels ({Bender} Dime)

̣ (under the vowel letter) denotes close vowels ($\text{ẹ} = \eta$, closed e). In Tg it denotes vowels of the higher series of vowel harmony

̤ (under the vowel letter) denotes open vowels ($\text{e̤} = \varepsilon$). In pTg it denotes the vowels of the lower series of vowel harmony

$\text{̣}'$ denotes retracted vowels ($\text{a}'^{\text{̣}} = \text{retracted a}$)

$\text{̣}'^{\text{h}}$ denotes advanced vowels ($\text{a}'^{\text{̣h}} = \text{advanced a}$)

̣^{h} at the beginning of a word - supersegmental lowering of all vowels ($\text{i} > \text{ị}$, etc.) (as in the Tungusic languages)

̂ at the beginning of a word - supersegmental higher articulation of all vowels ($\text{u} > \text{Ū}$, etc.) (as in the Tg languages)

Subscript vowel letters denote anaptyctic and ultra-short vowels (e.g. in Kalmuck, Kurukh), as well as the patach furtivum in Hebrew (רָאָה = רָוָה)

Superscript vowel letters $\overset{a}{a}$, $\overset{\varepsilon}{\varepsilon}$, $\overset{\upsilon}{\upsilon}$ denote $\overset{a}{a}/\overset{\varepsilon}{\varepsilon}/\overset{\upsilon}{\upsilon}$ -coloured shva (in Hb and JA: Hb צָוָה^אrayim = צָוָה^ארַיִם).

Superscript vowel letters ($\overset{i}{i}$, $\overset{u}{u}$, $\overset{o}{o}$, $\overset{e}{e}$, $\overset{ä}{ä}$) adjacent to vowels denote glide elements of diphthongoids (e.g. R НОС [n^uos] 'nose', Xlj ju^o] 'road')

(3) WITH BOTH CONSONANTS AND VOWEL LETTERS

⏟ (at the end of a word) - devoiced Auslaut

⏟ (i.e. S_U⏟a)- syllable boundary, e.g. in MM and MKo (rendering the MKo letter ◦ unless it denotes [h̥] - see Lee GKS 130-1, 150-3). Q: ’

(4) QUANTITATIVE DIFFERENCES OF VOWELS

vowel letters without diacritics of length or shortness denote short vowels (in languages with an opposition short vs. long) and normal ("full") vowels (in languages with an opposition normal vs. ultra-short and with a triple opposition long vs. short vs. ultra-short); an exception: special letters for ultra-short (reduced) vowels $\overset{a}{a}$, $\overset{b}{b}$, $\overset{b}{b}$

˘ denotes a ultra-short vowel (e.g. $\overset{a}{a}$); in languages distinguishing between long and short vowels only (L, Gk, pA) it denotes a short vowel
small subscript vowel letters denote ultra-short vowels (almost zero)

letters followed by $\overset{\cdot}{\cdot}$ denotes half-long vowels

vowel letters with a macron $\overset{\bar{\cdot}}{\bar{\cdot}}$ or with a following colon : denote long vowels

: (in the formula of a root or a stem) denotes vowel length as part of the formula (e.g. in Sv \checkmark : \checkmark W-, cf. 2486. *w \checkmark L \checkmark ∇ \checkmark ∇ 'run, flee')

letters followed by : $\overset{\cdot}{\cdot}$ denote ultra-long vowels

˘ (after the letter) symbolizes "schwachgeschnittene Länge" (in the Samoyed languages)

letters followed by $\overset{\cdot}{\cdot}$ denotes a short vowel (opposed to a long one), e.g. $\overset{a}{a}$.

(5) QUANTITATIVE DIFFERENCES OF CONSONANTS

Long consonants are denoted by double letters (tt) or by a colon : (t:).

Half-long consonants are denoted by the sign ˙.

Ultra-long consonants are followed by the sign ::.

(6) TONES AND STRESS

ˈ (before the syllable) - full stress.

ˌ (before the syllable) - weak stress

ː (before the syllable) - strong stress (e.g. phrasal stress).

ˑ (before the syllable) - secondary stress

The tones are denoted mostly by supralineal signs over vowels, e.g. by signs of the second supralineal level (higher than regular supralineal signs):

ˊ - high tone; in Kor. and Jap. this sign is quoted after Starostin's papers

ˋ - low tone; in Kor. and Jap. this sign is quoted after Starostin's papers

ˊ - middle tone.

ˊˋ - falling high-to-mid tone. Q: ˊˋ (e.g. ǎˊˋ = áá)

ˊˋˋ - falligh high-to-low tone. Q: ˊˋˋ (e.g. ǎˊˋˋ = áà)

ˋˋˋ - falling mid-to-low tone. Q: ˋˋˋ (e.g. ǎˋˋˋ = àà)

ˋˋˊ - rising low-to-high tone. Q: ˋˋˊ (e.g. ǎˋˋˊ = àá)

ˋˋˊˋ - rising low-to-mid tone. Q: ˋˋˊˋ (e.g. ǎˋˋˊˋ = àá)

ˋˋˊˋˊ - rising mid-to-high tone (mid rise tone). Q: ˋˋˊˋˊ (e.g. ǎˋˋˊˋˊ = áá)

ˋˋˋˋˋ - high rise tone (as in Wedekind's records of Janjero). Q: ˋˋˋˋˋ (e.g. ǎˋˋˋˋˋ = áá)

ˋˋˋˋ - very low tone. Q: ˋˋˋˋ (ǎˋˋˋˋ)

ˋˋˋˋˋ - very high tone. Q: ˋˋˋˋˋ (ǎˋˋˋˋˋ)

_ (after the syllable) - the tone (in ds. of Ko and J) designated by Starostin by a subscript macron: ǎ_ = St.'s ǎ

In transcribing languages distinguishing between more than three pitches of tones the first supralineal level is used for the mid low tone (ˋ, e.g. à) and for the mid high tone (ˊ, e.g. á), so that the tones are denoted as follows (ǎ standing here for any vowel): ǎˋˋˋ, ǎˋˋ, ǎˋ, ǎˊ, ǎˊˋ, ǎˊˋˋ, ǎˋˋˋˋ for very low, low, mid low, middle, mid high, high and very high tones respectfully. They may be denoted by subscript numbers as well: ǎˋˋˋ = a₁, ǎˋˋ = a₂, ǎˋ = a₃, ǎˊ = a₄, ǎˊˋ = a₅, ǎˊˋˋ = a₆, ǎˋˋˋˋ = a₇, falling mid-to-low ǎˋˋˋˋ = a₄₋₂, rising mid-to-high ǎˋˋˋˋˋ = a₄₋₆, etc.

If the tone sign precedes a word (as in MfG), it indicates that the word requires this tone in the preceding word (Brr.'s "ton flottant").

In proto-Slavic reconstructions, in Lt, Ltv and Lv the syllabic intonation (Slavic and Baltic accents) are denoted according to the Slavistic vs. Baltistic tradition.

In transcribing Korean dialects I use superscript L, T and V (preceding the syllable) to designate those tones which are symbolized in St. AJ and SDM95 by capital letters L, T and V (without explaining the phonetic meaning of the symbols).

In transcribing Chinese I use the traditional numeration of the tones (subscript numbers _{1, 2, 3, 4}).

For unwritten languages with expiratory syllabic intonation (like Liv) I use $\bar{\quad}$ (a highly placed macron) for the even intonation (Endz.'s "gedehnter Ton") (or leave the syllable without intonation sign), $\grave{\quad}$ (a highly placed gravis) for the falling intonation (initially-strong and finally-weak syllables; Endz.'s "fallender Ton") and $\acute{\quad}$ (after the vowel) for the stød ("Stoßton"). For written lgs. of this kind (Lt, Ltv) we use traditional accent symbols with traditional transliteration.

(7) ADDITIONAL SIGNS

(used in description and reconstruction of languages)

These signs should not necessarily be reproduced by scholars who quote my data. but have no technical possibility to reproduce the characters. If necessary, their meaning may be rendered by words of explanations.

1, 2, 3, 4 - radicals of S, B and Eg roots

\leftrightarrow - morphological, semantic, or phonemic opposition (L *reges* pl. \leftrightarrow *rex* sg., 'land' \leftrightarrow 'sea', *d* \leftrightarrow *t*); in semantic definitions: "opposite of, antonym of" (e.g., 'right' \leftrightarrow 'left')

\neg = and (for variants of roots and words); or (for alternative reconstructions)

\approx , \pm = approximately (in semantic definitions and in phonetic reconstructions); \approx before a reference means that the etymological or semantic interpretations in the quoted source are only partially shared by the present author

$\lceil \rceil$ - uncertainty brackets: $\lceil \bar{a} \rceil$ = \bar{a} or similar. EM: []

$\lfloor \rfloor$ - uncertainty brackets: $\lfloor \bar{a} \rfloor$ = \bar{a} or nothing. EM: ()

$\langle \rangle$ - brackets for silent letters (in transliteration)

_{1, 2, 3} - these indexes are used for reconstructed or ancient languages in order to distinguish between phonemes with unknown phonetic difference, e.g. OJ \bar{o}_1 and pJ $*\bar{o}_1$ = OJ \bar{o} , pJ $*\bar{o}$ (= $*\bar{o}$).

 [¿] - A. Dolgopolsky's doubts about an opinion (semantic interpretation, etc.) of another author
 + = "adduces" (used in references to other scholars)

The arrows \rightarrow and \leftarrow in references or between abbreviations for authors or bibliographical sources (A \rightarrow B or B \leftarrow A) mean that words\roots published (or registered, reconstructed) in a paper A (or by the scholar A) were later repeated (quoted) in a paper B (or by the author B). RECOMMENDED QUOTING EQUIVALENTS OF THE TRANSCRIPTION

When quoting data of this dictionary, scholars may find it hard to render the non-standard transcription signs found here. Hence we propose two systems of equivalents of my signs:

A. Some equivalents of the my characters and signs (available in the IPA, SIL, and other commonly used transcription fonts, in the Orientalistic transcription, etc.):

Consonants:	$\exists = \text{ʔ}$	$\zeta = \text{ʕ}$	$b = \text{b}$, 'b	$c = \text{c}$	$\check{c} = \text{č}$	$\hat{c} = \text{ç}$	\hat{c}
	$g = \text{G}$	$\gamma = \text{g}$	$\hat{h} = \text{h}$	$\dot{i} = \text{y}$	$j = \text{d}$	$\underset{\cdot}{j} = \text{'d}$	
$k = \text{k}'$	$\underset{\cdot}{l} = \text{l}$	$\underset{\cdot}{q} = \text{q}'$	$\lambda = \text{ɖ}$	$r = \text{r}$	$\underset{\cdot}{r} = \text{r}$	$\underset{\cdot}{n} = \text{n}$	$\underset{\cdot}{p}$
$q = \text{q}'$	$r = \text{r}$	$\underset{\cdot}{r} = \text{r}$	$\underset{\cdot}{r} = \text{r}$	$\underset{\cdot}{r} = \text{r}$	$\underset{\cdot}{s} = \text{s}$	$\underset{\cdot}{t} = \text{t}'$	
$\underset{\cdot}{t} = \text{t}$	$\theta = \text{θ}$	$\underset{\cdot}{z} = \text{z}$	$\delta = \text{ḏ}$ (Arabistic ḏ)	$\underset{\cdot}{z} = \text{z}$			

Vowels: $\beta = \text{ʌ}$ $\alpha_1 = \text{ɜ}'$, $\dagger = \text{ï}$, $\text{t} = \text{ü}$

Diacritics with consonants: $\underset{\cdot}{t} = \text{'}$ ($\underset{\cdot}{t} = \text{t}'$); $\underset{\cdot}{s} = \text{~}$; $\underset{\cdot}{z} = \text{~}$

Tones: complex tones of long vowels may be denoted by two vowels with the signs of the respective tone: phases, e.g. $\hat{a} = \acute{a}\grave{a}$, $\acute{a} = \acute{a}\acute{a}$, $\check{a} = \grave{a}\acute{a}$.

Uncertainty signs: The uncertainty brackets may be either spelled out (e.g. $*^1ka|_l a|_b-$ → $*^1kalab-$ or $*^1kalb-$, $*\hat{g}^h|_l er-$ → $*\hat{g}^h|\hat{g}er-$), or replaced by commonly used brackets: $|_l |$ → $()$ (e.g. $*^1ka|_l a|_b-$ → $*^1kal(a)b-$, $*\hat{g}^h|_l er-$ → $*\hat{g}^h(h)er-$), $|^r |$ → $[]$ (e.g. $*\hat{z}a|^r | \nabla$ → $*\hat{z}a[p] \nabla$). The sign ∇ → ψ ; æ (in reconstructions) → ä|e ; ζ → $\psi|G$; H → h|χ ; X → a|U .

B. Those scholars who cannot use the characters of IPA, SIL, etc., are advised to use my system of quotable equivalents for the characters used in this book (see above § 8, parts I, II, and III).

All this refers to transcription, rather than to transliteration or reproducing the national (Roman-based) script. The transliteration and the national Roman spelling are (and should be) quoted in their traditional form.

**ABBREVIATIONS
OF NAMES OF LANGUAGES, DIALECTS,
LANGUAGE FAMILIES, SUBFAMILIES,
AND SCRIPT SYSTEMS**

A. Names of languages, dialects, and families of languages

The sigla of the dialects follow those of the languages either directly (Lp L = Lule Lappish) or after a colon (if several dialects are mentioned), e.g. Lp: N ḡuoros, L kuorōs 'empty' (= "Norwegian Lappish ḡuoros 'empty', Lule Lappish kuorōs id."). If related words of several languages & dialects share the same meaning, it may be indicated either once after the enumeration of the languages\dialects (e.g. Hb 'kελεḅ, Ar kalb-, Ak kalbum 'dog') or after the first of the languages only with the indication "id." after the other language names (e.g. Hb 'kελεḅ 'dog', Ar kalb- id., Ak kalbum id.). If we quote a common word shared by several dialects of the same language or by several languages of the same family and the word has the same phonologic form and the same meaning in all these dialects\languages, their names may be separated by a solidus (slant line), e.g. Os V/Vy/Ty {Ht.} (= Vakh, Vasyugan & Teryugan dialects of Ostyak, as described by L. Honti), Brj/Ged/Hd/Kmb {Hd.} (= Burji, Gede'o, Hadiya, Kambata languages, as described by G. Hudson). In these cases the name of the scholar (who recorded or registered the forms) refers to all languages connected by a solidus. Abbreviations: d. = dialect, sd. = subdialect, ssd. = subsubdialect, ds. = dialects, sds. = subdialects, lge. = language. ∇ = attested in different epochs, from the most ancient documents of the lge. (e.g., Eg ∇ = Eg [from the most ancient documents on]), f... = from ... on (of historical variants of lgs.) (e.g. Ak fOB = Akkadian from Old Babylonian on). In the text of the dictionary the word "dialect" is symbolized as dl., dial., or Δ.

**SYMBOLS OF NAMES OF SCHOLARS,
TITLES OF COLLECTIVE PAPERS,
SOURCES OF INFORMATION**

Scholars and scholarly papers

These symbols (printed in braces near quoted words or roots) indicate scholars who recorded, reconstructed them or registered them in their papers, as well as collected papers mentioning these words or roots. The sign] (preceding the symbol of the source, within {}-brackets) means "in X's notation" (e.g. {]Bz}, {]IS}, {]SDM94}. The sign † (preceding the symbol) means "according to X's theory, hypothesis" (e.g. {†SDM94}, {†Hel.}, {†Rsl.}); {†πAD} means "according to AD's hypothesis about the prosodic origin of some proto-Turkic ascending diphthongs". The sign ∂ (before the symbol of the source) indicates that the transcription of the author in question is indicated with Dolgopolsky's modification (interpretation). If an author has different notations or theories in his\her different papers, the abbreviation of the paper is added (e.g. {Ks. E}, {Ks. Z}, {Stl. ZCh}, {Stl. IF}). The sign "←" between names means "after" ("Bm. ← IS" = "Bomhard after Illich-Svitych"). Accordingly, "→" means "and from him..." ("Fr. → Hv." = "Freytag and from him Hava"). The signs "←?" (after the symbol of an author) mean "quoted by X from an unspecified source" (e.g. {Sk. ←?}). Abbreviations: "ms." = "manuscript", "p. c." = "personal communication", "s. v." = "sub voce" ("under the word"), "q. v." = "quod vide" ("which see"), "l. c." = "loco citato" (in the place cited above). If the symbol of an author precedes the meaning of a word\stem, it means that the scholar in question is responsible for the semantic definition rather than to the form of the word\stem.

The arrows → and ← (A → B or B ← A) between names of scholars mean that words\roots published (or registered, reconstructed) by a scholar A were later repeated in by a scholar B. "Msg Ng {GKrs. → Lk.} gī'liŋ" means that Msg Ng gī'liŋ was recorded by Gottlob Adolf Krause and later published by Johannes Lukas. {IS → BmK} means that the etymology (reconstruction) proposed by V. Illich-Svitych was later repeated or quoted by A. Bomhard and J. Kerns. The arrow ← with a query ("A ←?") means that the source of the form quoted by A (but not recorded by him!) is unknown.

On semantic designation for subfamilies (or sub-sub-families) of languages. If the semantic definition of a word or a root is indicated with the proto-form only, it means that it is preserved in all descendant languages mentioned in the entry; e.g. "pCh *tab ∇ 'mud' > WCh: Hs t \grave{a} b \acute{o} , Gw t \acute{o} bo || BI te \mathfrak{b} \mathfrak{b} i, Ngm nd \grave{e} \mathfrak{b} i || Ngz t \acute{a} b \acute{o} || Cg nd \acute{a} b \acute{a} k \acute{u} \acute{a} n, Kry t \acute{a} b \acute{a} k \acute{u} , Sir t \acute{a} b \mathfrak{z} h $\acute{í}$, Mbr nd \acute{a} b \acute{a} k \acute{u} , Dir \acute{a} t \acute{u} b \acute{a} k \acute{u} || Kir nd \acute{o} p or \acute{n} d \acute{o} p, Plc nduw \mathfrak{z} p or \acute{n} duw \mathfrak{z} p, Dw ndw \mathfrak{a} p, i.e. \acute{n} d \acute{u} \mathfrak{z} p or \acute{n} d \acute{u} \mathfrak{z} p || CCh: Tr: Pdl t \acute{a} bd \acute{i} , Hw t \acute{a} b \acute{u} r \acute{a} , G'nd t \acute{z} pta, Gbn t \acute{z} pt \acute{a} , Boka t \acute{z} pt \acute{z} || McHigi: FIM d \acute{u} b \acute{u} || Ktk {Nw.} nd \acute{a} \mathfrak{b} e || ECh: Tmk d \acute{u} b \acute{o} , Nd D

də̀byà" = "pCh *tab̥∇ 'mud' > WCh: Hs tà̀bò id. (↳ Ngz tà̀bó), Gw tòbo id. | Bl tèb̥i id.", etc.

Abbreviations and signs within semantic definitions: anyth. = anything, bc. = become, esp. = especially, smb. = somebody, so. = someone, somebody; sth. = something; th. = thing; \ = or, as well as (between alternative parts within semantic and grammatical definitions) (e.g., 'be weak \ soft' = 'be weak, be soft', sx. of du.\pl. = sf. of du., sx. of pl., 'some-\any-thing' = 'something, anything'); ≈ = approximately; ∈ = a kind of; us. = usually; '↑' = anaphoric sign "the meaning of a N word which is identical with the abovementioned meaning of the same root" (in cross-references within the same entry). In Latin definitions: pec. = peculiariter (especially).

N. b. If a root\stem of a daughter language family or its branch is found in two or more etymological entries (due to the merger of N roots), it is specified (traced up to the level of attested languages) in one entry only. In the other entry\entries there is a short reference note with a siglum "q.v. ffd." (= "see for further details") that refers the reader to the entry with full information.

Signs denoting reconstructions and hypotheses:

- * - precedes a reconstructed form, word, or morpheme
- ** - precedes an indirect reconstruction (e.g. internal reconstruction)
- *^o - precedes a reconstructed proto-form represented in one branch (of the family) only
- * - precedes reconstruction of meanings
- * - precedes wrong reconstructions (or those not shared by the present author) or wrong translations of words
- ⇔ precedes bibliographical indication of opinions that are not shared by the present author
- ¶ precedes reference to literature concerning the word\morpheme in question in a branch of a language family or precedes comments on the morpheme\word in such a branch
- ¶¶ precedes reference to literature concerning the word\morpheme in question in a language family or precedes comments on the morpheme\word in such a family
- ◇ precedes reference to literature concerning a proto-Nostratic word (root) or comment on a Nostratic word

◇ precedes reference to doubtful opinions concerning etymologies based on long-range relationship of languages

BIBLIOGRAPHY

This bibliography includes papers explicitly quoted in the text, as well as other sources of background information (dictionaries, studies in historical and synchronic phonology, morphology, etymology, language relationship, etc.). In references the sign \forall means "the whole paper". "S.p." means "separate pagination" (of an article within a journal or book); "l.c." = loco citato, "n. t." = no title, "s. a." - sine anno (without indicated year), "s. l." - sine loco (without place), "pl." = plate(s); "n. s." = new series, nouvelle série (= "N.F." = neue Folge); "transl." = translation The superscript P denotes preprints. MF = Microfilm; "p. c." means "personal communication".

In the etymological entries lists of bibliographical sources and comments are preceded by special signs:

the sign ¶ precedes a list of sources for a branch of a language family, as well as comments that refer to a branch of a family

the double sign ¶¶ precedes sources and comments for a family of languages,

the sign ◇ precedes sources and comments for the Nostratic macro-family,

the sign ◊ precedes doubtful bibliographical sources and comments that refer to inter-family relationship.

The sign \forall (instead of the indication of pages) means "throughout the paper"

The symbol \Leftrightarrow precedes bibliographical indication of opinions that are not shared by the present author. Those which are only partially shared by me are indicated by the symbol \approx .
