JDP A 108, Rnr EL 76, 89-90, Paper RAE 93-7 ◇ The pK (> OG, G, Sv) syntax (at least in the past tenses) was ergative, the agens of the transitive verb being expressed by a noun in the agentive (ergative) case. This fact suggests that the agentive px of 1s *(h)w- goes back to a N prn. meaning

'by me'. The existence of an etymologically identical 1s px (*ʔ∇-) in HS suggests that in the prehistory of HS there was an ergative period, with the ergative construction being predominant in the language, hence the prevailing verb structure with *ʔ∇- as the marker of 1s subiecti. But it is likely to have coexisted with a HS nominative construction, as far as one can judge from its scarce traces: [1] the verb yom-mi 'I am' / yon-ti 'thou art' in Kmb, the form of the dependent verb in Hd: 1s 'yó-m-o, 2s 'yón-t-o, ending *-m∇ / *-t∇ of certain tenses in HEC (going back to the analytic construction of a verbal noun + the aux. verbum substantivum *yon-mi/*yon-ti, *F* AD PLOG 103-10), suggesting that verbs with *-mi as the subject ending of 1s (similar to and etymologically identical with verbs in IE and U) still existed in early pHS, [2] the accus. ending *-m∇ that survived in SOm, unlike in all other HS lges, where its absence may be explained by the predominantly ergative syntax and where patiens (later accusative) is the unmarked actant of the sentence ("actant" in Mel'čuk's terminology). The preverbal position of the agentive subject markers in K (*ʰw-) and in HS (*ʔ∇-) corresponds to the syntactic rules of pN: agentive pronouns do not occupy the post-predicative (sentence-final) position (as the N subject pronouns *mi 'I' and *t'ü'/*s'ü' 'thou' do), but are placed before the predicate (as all object words do). In apparent contradiction to this rule, the pIE stative marker of 1s *-xε and the other above-mentioned pIE endings of 1s follow the verbal stem rather than precede it. The contradiction can be explained away by supposing that these IE verbal forms go back to a pre-IE analytic construction of a verbal nominal + a prefix-conjugated aux. verbs (as in C) ◇ The N vw. *-o- is re-constructed on the ev. of K (pointing to a labialized vw.) and IE (IE *-xε rules out N *u and *ü) ◇ For ffd. *see* AD PP 67-74, 82-7, 93-103, 112 ◇ ≠ Gr. I 67 (connects IE *-H of 1s with "EurA" K 'I' > Hg. -k 1s etc.).

SJ 84 || A: T (after vowels) *-ḡ, (after cnss) *-uḡ / *-üḡ 'thy' > OT (after vowels) -ḡ / -ḡ, (after cnss) -uḡ / -üḡ / -iḡ / -iḡ, Az Δ -ḡ / -ḡ / -uḡ / -üḡ ~ -w / -u w id. (gen. ḡōz-üḡ-ün 'of thy eye', baba-ḡ-in 'of thy grandfather', accus. at-u w-i 'equum tuum'), Chv L -ḡ / -ḡ (-u / -ü) The Chv sx -u / -ü

may go back only to rounded allomorphs *-ug / *-üḡ, hence I am inclined to assume that the OT unrounded allomorphs *-iḡ / *-iḡ are secondary. They are due to labial harmony of vowels, which is a rather recent morphophonemic phenomenon. Acc. to Tekin GOT 63, "in Orkhon Turkic the labial harmony is at its first stage of development". Side by side with the allomorphs *-g / *-ug / *-üḡ, there are nasalized allomorphs *-(u/ü)ḡ (~ *-iḡ/*-iḡ?). In OT we find both unnasalized and nasalized variants of the sx. In most later lges of the NaT branch, the allomorph *-(∇)ḡ is the only one in use. Acc. to Bz. Tsch 726-7, the nasalized variant is represented by the Chv optional allomorph -ъп-, used in the oblique cases side by side with the usual *-u/*-ü: the genitive -ъп-ъп 'of thy ...' alongside with -u-п. This suggests that Chv reflects the pT distribution: the allomorph *-(∇)ḡ was originally used in the oblique cases only, and it may be conjectured that it resulted from nasalization of the sx *-(u/ü)ḡ by the adjacent genitive ending *-п ¶ CafD A 302, Kon. Tm, MI *cem-*, Tu *kem-*, Tl *kem'* - (in a few composita) 'red' ¶¶ D no.
1931 ¶¶ The D cognate is valid unless *kem- is an extension of D *ke-
'red' > Tm, MI *ce-* etc. (D no. 1931) ◇ WrMc -э- and D *-e- suggest a
N front vw., while U *a may go back to N *ä (regr. as.). But if the D
cognate is rejected, there is an alt. hypothesis: N *kamê > U *ka_{L:J}me and
WrMc {Z} *кэм-* (regr. as. of the vw. from *kamê). The comparison with
D was suggested by Blz. (Blz. C). But D *kem- is a qu. cognate both for
phonetic reasons (*e instead of *a < N *ä) and because it is likely to be
an extension of D *ke-, *key- 'red' ◇ ≈ Gr. II no. 45 (*kem 'blood').

III 608, MED 470, Luv. 597, BMR IV 736 ¶ The M stem is a valid cognate unless the meaning 'dawn' is based exclusively on HIM {Luv.} ũr and үүр, while kiraga has an auxiliary semantic function (sth. like 'border', cp. WrM kira, HIM хяр 'summit, ridge', so that the literal meaning of ũr-ün kiraga is '≈ dawn's ridge'). If M *kira^ʔa is a valid cognate, its vw. *-i- may be

explained by delabialization of pA *-ü- ◊ D *-r- (regularly from N *r|ř- clusters, but not from the N intervoc. *-ř-) and the traces of the lr. in IE point to a N lr.; since the only N lrs lost in Ak and not transforming *a into e are *h and *ʔ, the N lr. is likely to be *h|ʔ. An alt. rec. is N *küri^ʔ∇, whence later: [1] **küriy∇ > **küry∇ > T *k'ōre- and *k'ōr, [2] (elision of *i): **kür^ʔ∇ > T *k'ōre- and D *kur- ◊ ≈ IS I 239 [no. 95] (he included this T √, together with several others, into the etymon *gūr∇ 'embers') ◊ T *k'- (suggested by Tkm k- [cf. S AJ 8-9]) is puzzling. It may be very tentatively explained as going back to pA **k'...ʔ- from N *k...^ʔ-.

(N * K_0 'who?' > HS, IE, U, A), Gr. I 217-24 ("interrogative K" in IE, U [including Y], A, Ai, ChK, EA + unc. Gil) \diamond Acc. to IS's hyp., * K_E is a Uralo-Altaic innovation, a variant interr. word based on the analogy of the dem. particles\pronouns. The opposition of the N iste-deictic * h^re^1 'this' (\approx Illich-Svitych's * ?i / (?) * ?e) vs. pronouns with back vowels (e.g. N * ha 'ille') was introduced into the system of interr. pronouns, so that alongside with N * K_0 'who?' a new hic-deictic interr. prn. * K_E 'wer hier?' appeared. Starostin, A. Dybo and Mudrak try to unite the A reflexes of N * K_0 and * K_E by reconstructing pA * $\text{k}^r\text{a}_1\text{y}_1$ (SDM97 s.v.), which is not a good solution, because the difference between N * K_0 and * K_E has survived not only in A, but also in U. The variation * $\text{e} \sim \text{ä} \sim \text{i}$ in the U and A lges is still to be explained.

IV 342-3, Dlm. 367, Sl. 1030, A no. 1307, OLS 212 ◇ The Tv word points to a N emphatic *K̑-, while the HS words allow the rec. of both N *k- and *K̑- (taking into account frequent de-emphatization of N *K̑- in HS). We reconstruct N *-y̑n|ñ- rather than *-ń- (suggested by the FU rec. of *ki|ũńä, as proposed in FUV) on the ev. of T *-n- in *k'ȭnæk (because N *-ń- would have remained in pT as *-ń-) and the preceding pT (> Tkm) long vw. *ȭ (< **öy < N *uy [regr. as.]); regr. as. *-uyñä > pre-T **-öynE.

 'sand' ¶ STM II 20 ◇ The original affricate may have been * \hat{c} (if the
 G word is a loan from Zan, which presupposes a pK rec. * $k \nabla n \hat{c}$ -). The
 cns. * $\eta | \acute{n}$ changed into m in Bnc, into *n in K (as. * $\eta \mathbf{C} > *n \mathbf{C}$) and
 disappeared in most other descendant lges (* $\nabla \eta | \acute{n} \hat{c} > * \check{v} \hat{c} > * \nabla \mathbf{C}$). In
 the prehistory of IE the original cluster * $- \acute{\eta} \hat{c}$ - is likely to have
 changed into * $- \acute{n} \hat{c}$ - (regr. as.) > * $- \check{i} s$ - (N * $\acute{n} > IE * \check{i}$ regularly),
 supported by the heritage of N * $k^{\prime} \ddot{u}^{\prime} \check{s} \check{?} \nabla$ (* $\ddot{u} > *i > * \check{i}$). An alt. rec. is
 * $k \check{E} m \hat{c} \nabla$, which is less probable in the light of Tg * $\chi o \eta \acute{n} \nabla$. The cause
 of the de-emphatization in pre-IE (N * $k^{\prime} > *k$ - [> IE * \acute{g}]) or the
 voicing in IE (* $k^{\prime} > * \acute{g}$ -) is still not clear. The unexpected Tg *o of the
 first syll. still requires explanation (regr. as., as suggested by Orc
 $o \acute{n} o k t o$, Ud $o \acute{n} o k t o$, Ork $\chi o \eta \eta \eta o \chi \iota$ and $\chi o \eta o k t o$?). Tg * \acute{n} (for the
 expected * \check{c}) may be due to assimilation (* $- \eta \check{c} > \check{i} *^{\circ} \eta \acute{n}$ -).

These two variants may represent two different results of synharmonic levelling, suggesting the existence of a front vw. in the second syll. of the N word ◇ The presence or traces of a rounded vw. (* o ?) in U and Ch as opposed to the presence of * a in A and C may be explained by assuming a trisyllabic etymon with both * o and * a . This hyp. is directly suggested by Su k^wayap 'bark' and indirectly by the long vw. in T * k'ābuk . In view of Su k^wayap the etymon * $\text{Қон}_2\text{ар}^1\text{U}$ is preferred to * $\text{Қан}_2\text{ор}^1\text{U}$ ◇ IS MS 344 († q^1op^1 'bark') ◇ IS (l.c.) proposed to equate U * kopa 'bark' with M * qobuyā 'well bucket (usually made of skin)' (MED 950, KW 191) and with ET qobuq , qobuzaq 'bark' (which is a labialized var. of pT * k'ābuk 'bark'). His

rec. of *^rq̄- is based on comparison with K *^tq̄ab-/ *^tq̄aw- 'skin, fell', which is hardly acceptable (≠φ). The Ag *-pp- and the cns. *-b- in some Ch lges may be explained by the presence of a N lr. (*ʔ or *ɣ). In T *k'ābuk and possibly in Ch (Sy Z kóʔɛk) one may discern traces of a suffixed element. There is an interesting parallel between M *qa^rβ^rurqay and ECh (Kwn kábárów, Smr kábə́rə́w 'bark') ◇ ≈ AD NM no. 93 (*^ʔq̄a^rβ^r|^ʔɣ^rɛ^r), S CNM 5, Vv. AEN 6.

132-3, Br. OTG 115-16 || M *-l, sx of deverbal adjectives (and quality-bearing nouns): M *tanil (> WrM {MED} танил 'familiar person, an acquaintance', HIM {MED} id., {BMR} id., 'приятель', Brт танил 'familiar person, an acquaintance', Ord t'anil 'personne qu'on connaît pour avoir eu des relations avec elle, commaosamce') <- M *tani- (WrM тани {MED} 'know, be familiar with', HIM тани- {MED} id., {BMR} 'recognize, erkennen, узнать', Brт тани- id., Ord t'anī- 'reconnaître') ¶ MED 778, BMR III 189-90, Chr. 413-4, Ms. O 645 || Ко -l, -il, sx of prtc. ft. ¶¶ Rm. VAJ 132-44 || ?? D: Mlt -le, sx of past prtc.: tuñd-le 'who saw' ¶ Drs. s.v. -le || HS: EC: Sml -le '-er, -or; owner\keeper\seller of sht.': damēr-le 'owner of a donkey', dukān-li-hī 'shopkeeper', hilib-le 'butcher', Rn lē-aḥe (aḥe is 'be', y-aḥe is 'is') 'have (some quality), be (of some kind)': žīra kumurrōné lē-yaḥe 'Jira has wealth' = 'Jira is rich', žīra séyhó lē-yaḥe 'Jira has laziness' = 'Jira is lazy' ¶ ZMO 257, PG 210 ◇ The N cns *l and *l̥ can be distinguished only on the ev. of U and D (namely some ds of Os and certain D lges, but not Mlt). In this case the only ev. for N *l̥ (rather than *l) is an Os sx of rather questionable semantic connection with the meaning of the N etymon; hence we cannot be sure that the N etymon had a cns. *l̥ rather than *l. The U long vw. *ē points to a lr. in the pN etymon. The loss of the lr. and its traces in K, EC and IE suggest that the lr. was *ʔ ◇ IS II 20-1 (IS included here both the formant of adjectives and the pc. with diminutive meaning [see N *l̥ ▽, diminutive pc.]), Gr. I 186-91 ("gerundive-participle L" in IE, U [Sm, Y], A [T, Ko], Gil., ChK, EA) ◇ The presence of the vw. i (and similar vowels) in K *-il-, L sen-īl-iṣ, Gk ποικίλος, T *ük-il, *kír-il suggests a merger with N *hil̥U 'stand, be, exist' (q.v. ffd.) ◇ The long vw. in U *l̥ē- suggests the presence of a pN lr. The only N lr. that is not reflected by NaIE *ə or a long vw. is *ʔ. Therefore our tentative rec. of the N word is *le̥ʔ ▽, or *le̥ʔ ▽ ◇ The functional change from an autosemantic word to a derivational sx may have been as follows: noun X + N *le̥ʔ ▽ (or *le̥ʔ ▽) 'X-seiend, who is X, who has X' (e.g. Rn žīra kumurrōné lē-yaḥe 'Jira has wealth' = 'Jira is rich', žīra séyhó lē-yaḥe 'Jira has laziness' = 'Jira is lazy') → a derivational sx: T *kír-il 'what\who is red' <- *kír- 'be red', Sml. damēr-le 'who has a donkey, owner of a donkey', Ng ḡamta-lā 'having a horn, horned', F veteleä 'watery' ← 'having water']; this sx spread also into the realm of deverbal nomina agentis (→ participles).

OT 191 ◇ IS II 48-51 (*-m^A > IE, U, A, D), AD PP 92, Mng. MP 21-36, Coll. IUS 21, Coll. HUV 130, Ivn. VNZN 148 (on the original analytical status of this accus. ending), Gr. I 129 (IE, U, A, incl. J) ◇ I am grateful to Blz. for drawing my attention to the Om cognate. In IE the nouns of the non-animate (neuter) gender do not distinguish between nom. and accus. (and hence have no accus. ending), because there is no syntactic necessity for it: nouns of the non-animate gender do not usually appear as subjects of a trans. verb, therefore in sentences with trans. verbs they always function as their object. In other words, in IE (as in many lges) the marker of accus. is used only when it is necessary for syntactic distinctions. It is a trace of an old N syntax that had no obligatory grammatical categories (unlike in later IE lges with their grammatical categories of compulsive usage, even when not necessary for communication). In F the morpheme of accusative is not used after the imv., which reflects the same original situation: the form is not used wherever the syntactic function (object of the verb) is obvious from the context. In Sm and Tg this case marker denotes a definite object. All this suggests that originally *m^A denoted a marked accusative.

1352. *m^A, a marker of nominalized syntactic constructions (≈ subordinate sentences), nominalizer (originally a prn.) that formed analytic equivalents of nomina actionis, nomina agentis and other derived nouns > **HS** *m∇-, prefix of derived (mainly deverbal) nouns: S: [1] S *m∇- as a px of prtcs: (α) *mu-1a2¹2i3-, act. prtc. of the *D*-stems > Ak mu1a22i3-, Ar mu1a22i3-, BHb mə1a2¹2ē3, Aram mə1a2¹2e3, Sr mə1a2¹2ε3 (on the meaning of ε in Sr cf. below in the chapter "Phonetic symbols and other signs used in the etymological entries", III, B]), Gz mə1a22ə3 id., (β) *mu-1a2¹2a3-, ps. prtc. of the *D*-stems > Ar mu1a22a3-, Sr mə1a22a3, BHb (with an analogical u) mə1u22a3, (γ) *mu-ša1¹2i3-, act. prtc. of the *Sh*-stem (causative) > Ak

Tm -mał in the negative adverbial sx -amał || NED: Krx mał 'not', mał-nā 'not to be (so)', mał[?]a 'not, no', Mlt mała 'not, no', mał- 'be not' ¶¶ Grr. IV 487, D no. 4743, Pf. 194 [no. 184] ◇ AD GD 2 (HS, K, IE), IS II 56-7 (*mä prohibitive in HS, K, IE, D, A), Gr. I 213-14 ("negative M" in IE, T, ?? Ai). ◇ In IE, K, D (Gondi), Irq and M the particle functions as prohibitive, in Ar it is negative (of the indicative mood), while in C, Ch and T it is used in both functions, so that we have no definite ev. to determine which of the two functions was primary, though it seems preferable to suppose that originally it was prohibitive. The length of the vw. in Ar, NaIE, K, M and D (Gondi) suggests the presence of a lr.; the only lr. that may have been lost in S is *h, hence we tentatively reconstruct a *h of the second syll. (suggested also by the Ar reduplicated verb ✓mhmh). The ev. of most lges points to the vw. *A (sc. *a or *ä) of the first syll., but M points to a front vw. (probably *ä). The labialized vw. in M *bū and in the Sv variant mō, mōd(e) point to the infl. of a labial factor (final *o?), but the IE e-colored lr. *H̄ (for the expected labialized *H^ω) still requires explanation ◇ IS II 56-7 (pN *mä, prohibitive pc. > HS, H, IE, D, A).

IM 215-18, 220 || pJ {S} *bà- 'I, we' > OJ wa-, a-, J: Ht bànù, K wàte, Kg ói, Ns/Sh wàñ; ⇨ : [1] MJ [RJ] wátákúsí, J T wataku sí, wàta sí 'I, myself'; [2] OJ wa(re) 'we', J: K wàtére, Ht bàimà, Y bán tá id., StJ ware 'oneself, self, ego' ¶ pJ *b- is probably a regular reflex of N *m- in pronouns and grammatical particals (cp. pJ *bз [accus. and emph. pc.] from the N pc. of accusative *mA). In the pronoun in question the denasalization *m- > *b- occurred already in pA ¶ S AJ 266 [no. 38], S QJ no. 38, Syr. DJ 90-1, Mr. 569, Kenk. 2130 and 2135, Mchz. ∇ (J watakusi < *wa-tu-(a)ku si lit. 'my place direction') ¶ But pKo *úrí 'we' is likely to go back to a combination of N *mi with the N plural marker *r∇ yE (see s.v. ffd.) ¶¶ ≈ S AJ 57, 276 [no. 36] (pA *bā 'I'), SDM 341-2 (on pA *bi 'I' > Tg *bi, M *bi, T *be- 'I', mentioning the stem of oblique cases of 1s [M *min-] and the pronoun of 1 pl. [Tg *bue, *min-, M *bue, *min-, T *bi-r 'we'] + unc. pKo *úrí 'we'), Pp. IM 261-2), Pp. IM 261-

2), DQA no. 126 (pA *ba/*mju-n- 'we') || HS: ? C: HEC *-m∇, verbal ending of 1p > Sd -mo, Hd -mo, -miya, Hd Lb -mina, Kmb, Alb -mi ¶ The ending may go back either to N *mi ʔa or (acc. to Blz.) to the HS *(ʔan)muni 'we' with *-muni as a compound form parallel to the 2p *(ʔan)tun∇ 'ye' ¶¶ Blz. PPCh1 1-4 ¶¶ IS II 53 tried to adduce the Ch pers. prn. of 1p incl. *mun (reconstructed by IS as *m(ɾ)). But in the light of Chadic comparative ev. and the existence of the Ch prn. *kun 'ye' it is more likely that Ch *mun is a pCh (or pHS) innovation based on *m (1 person) + *-un (pl. ending). The pCh system may be reconstructed as follows:

	sing.	pl.
1 pers.	?	*mun∇
2 pers.	*ku (2m)	*kun∇

This suggests a prn. of 1s *m∇ (< N *mi [q.v.]) and the composite origin of Ch *mun∇ 'we' incl. ¶¶ Blz PPCh, Kr. RChP, Brq. PS, AD EPCChL || D *ma- ~ *mā- 'we' excl.: > Tl mā- ~ man- obl. 'we' excl. mā-namu (obl. māna-) we incl.; Gnd mā- obl. 'we' excl., Knd mān (obl. mā- 'we') (no opposition incl. ↔ excl.), Kui, Ku ma- obl. 'we' ¶ An. DJ (table 10 after p. 60), D no-s 3647 and 5154 ◇ Cf. N *ʔa, pc. of plurality ◇ ≈ IS II 52-6 (*mā, 1p incl.), MR ISNT 64-7. ◇ Unlike IS, I do not believe that this prn. (N *mi ʔa) was originally specialized as either incl. or excl. In M and Tg it was opposed to the inclusive M *bidanu and Tg *miti ~ *minti (both from N *mi t'ü' 'I + thou' and *mi nu t'ü' 'I + genitive pc. + 'thou') (Pp. IM 220, MED 102, Bz. 107, STM I 539) and therefore acquired the meaning of an exclusive 'we'.

1354b. *mi t'ü' 'we' incl. (N *mi 'I' + N *t'ü' 'thou') is found in M, Tg, Gil, Sm and probably in Y: A: M *bida (~ *bide?) 'we' incl. > MM bida, WrM {MED} bide(n) ~ bida, Ord b_idā, Dg {Pp.} báda id.; in most modern lges the opposition excl. ↔ incl. has been lost, so that the extant forms mean 'we' without this opposition: HIM Бид, {Pp.} bid:ə, bʲaddə, Brt Бидэ, {Pp.} be'de, Kl {Rm.} bidə and {KRS, Rm.} Бидн bidn (< gen. *bida-nu), Mnr {Pp.} buda; gen.: *bida-nu > MM bidanu, WrM bidan, Dg bádanī 'our' incl., HIM {Pp.} bidnī ~ biddānī 'our' ¶ The final *-a is on the analogy of M *ba 'we' excl. (< N *mi ʔa) ¶ M *-d- for the expected *-t- (from N) is still to be explained ¶ Pp. IM 215-17, Pp. MA 118, MED 102, KRS 97, KW 44, SM G 36-8 || Tg *m|biti (gen. *minti) 'we' incl. > Ewk mit(i), Sln mīti, Lm mut, Neg bitta ~ bit, Orc biti, Ud minti, WrMc {Z} мѳсэ 'we' (-с- may be a trace of the ancient N [regional?] var. *mi s'ü' 'we' incl. [with *s'ü' 'thou']?) ¶ *-n- in Tg *minti is from N *nu genitive, but the detailed history of the form is not yet clear ¶ Ci.

IE: NaIE: Crn s x - m a (← encl.) 'this', W y m a 'here, this', Br m a (ř) 'this' ¶ ECCE 267, YGM-1 43, Hm. 545, LP 272 (§ 367.2) ◇ IS II 70-1 (*m u, dem. prn.: K, U, A, ?HS, ?IE). In spite of the long vw. in U and A, IS preferred to reconstruct a monosyllabic etymon, because a bisyllabic form "would have contradicted the typical monosyllabic structure of the non-categorematic stems (незнаменательные основы)". But the monosyllabicity of pronouns and other non-categorematic words in the attested lges is not necessarily due to their original shape, it is often due to the universal diachronic tendency of shortening of such words (e.g. L e c c e i s t e > F r c e, L i l l ö r u m > F l e u r, S l *a z b > R я 'I, A S t ö w e a r d > N E t o w a r d [tō d], pS *š u a > B H b h ū 'he' etc.). In the light of the extant ev., IS was right in supposing that this prn. did not take part in the distance opposition *hic* ↔ *ille*, so that the *hic*-deixis of the prn. in T and the *ille*-deixis in FU must have developed within these descendant lges due to the opposition to other dem. pronouns.
