 AD GD 14, IS I 7 (*t ä 'this, that') → BmK 287-9 ◇ The N prn. *t ä is
 a member of several semantic oppositions: [1] N *t ä as a prn. of non-
 active objects is opposed to N *s E (prn. of active [animated] beings
 and active objects). This opposition is preserved in IE (*s o 'he' [active
 gender] ↔ *t o T 'it' [non-active gender]), partially in FU (F h ä r n and Lp
 N {N} s q̄ r n [both from N *s E] are used for human beings ['he\she'],
 while the t -pronouns are used indiscriminately), in D (Krx -s m. ↔ - d
 ntr. and f. [merger of homonymous markers] in pronouns, F Hahn KG
 23-6) and probably in Eg (-f [< *s w -] m. ↔ - t f. [sc. "female-and-
 inanimate" gender]). In some daughter-families N *t ä was opposed to
 the N animate *y i 'he' (e.g., S *y - 3m [< N *y i 'he'] ↔ *t - 3f) or to
 other dem. pronouns (that either were connected to animate beings or
 were originally neutral as to the opposition 'active' ↔ 'non-active'): C
 *k - m. (< N animate [?] dem. prn. *K r ü) ↔ *t - f., Sm: in Ne T the

pronouns ТЮКУ and ТИКИ (anaphoric) are used anaphorically when referring to non-humans only, while for human beings the prn. of 3s ПЫДА 'he\she' (a Ne innovation) is used (Ter. OGNJ 148) | [2] The N prn. *ṭä as denoting a single object is opposed to the N prn. of collectivity\plurality *n̄ä (q.v.). The opposition is preserved (a) in U (e.g. F ṭämä 'this' ↔ nāmä pl. 'these', ṭuо 'that' ↔ nuо pl. 'those' etc.), (b) in Eg: pṣ 'this, the' m. ↔ tṣ f. ↔ nṣ abstr., pl., pω 'this' m. ↔ tω f. ↔ nω abstr., pl., pṛ 'this (near me)' m. ↔ tṛ f. ↔ nṛ abstr., pl., pf 'that' m. ↔ tf f. ↔ nf abstr., pl. (Gard. 85); in Eg O (acc. to Ed. 83-9, EG 216 and 251) nω, nf etc. were not pl. forms, but abstract pronouns: nω 'Dieses, Dieses da', nf 'Jenes', probably from collective pronouns: pω 'this' m. ↔ tω f. ↔ nω abstract < *coll.), (c) in IE ("primary" verbal endings: *-ti 3s ↔ *-nti 3p, "secondary" endings: *-t 3s ↔ *-nt 3p), while in Eg fMK nω, nṛ and nf had (preserved?) the function of pl.; this situation may go back to an ancient difference between dialects of Eg, so that one cannot rule out the very old age of this n-pl. of pronouns (which may be even inherited from pN) (cp. the dual marker *-ni in S, -n of du. in Tz {Stm.} mārāw-i-n 'twenty' and other traces of the N pronoun of duality *nE 'they [two]' [in U, K and A, see s.v. *nE]) | [3] A new opposition of N *ṭä demonstrative vs. N *Ḳo interrogative has developed in some lges, in which both N *Ḳo 'who?' and N *ṭä lost the semantic feature of animateness (in N *Ḳo) and inanimateness (in N *ṭä), and both were generalized as interr. resp. dem. pronominal stems: L quantum ↔ tantum, NHG was ↔ das, wer ↔ der, NE where ↔ there, when ↔ then, R куда 'whin?' ↔ туда 'dorthin', когда 'when?' ↔ тогда 'then', как 'how?' ↔ так 'so', какой 'which?' ↔ такой 'such', Y T qada 'where?' ↔ tada 'there', probably also in WrM kedū(n) 'how much?' ↔ tedūi 'so much' ◇ The sx of the theme-focalizing case (≈ marked nominative) *-re in A *te-r∇ (preserving this function up to the attested M lges) is akin to the IE nominative-accusative ending *-r in heteroclitic nouns and is to be projected up to the pN level (F N *r∇, theme-focalizing [topicalizing] pc.) ◇ IS I 7 (IE, HS, K, U, A, D), Gr. U. LIST OF NOSTRATIC ENTRIES AND OF INDO-EUROPEAN ROOTS

Introduction: Alphabetical order of entries. The alphabetical order of consonants is as follows: *ʔ (incl. *ʔ), *ɸ (incl. *ɸ), *b, *c (incl. *ć, *ċ, *ċ', *C), *ç (incl. *ć, *ċ, *ċ', *C), *č, *č', *ĉ, *ĉ', *g, *g, *ɣ (incl. *Γ), *h, *H (incl. *H, *H₁, *H₂ and H₃), *ħ, *k (incl. *K, *k, *k̄), *k̄ (incl. *K̄), *l (incl. *l, *l̄, *L), *l̄, *m, *n (incl. *n̄, *n̄, *n̄, *N), *ń, *ŋ, *p (incl. *p̄, *P, *P̄), *q (incl. *Q), *q̄, *r (incl. *R), *r̄, *s (incl. *ś, *ś̄, *ś', *S), *š, *š', *t (incl. *T), *t̄, *w, *x (incl. *X), *y, *z (incl. *z̄, *z̄, *z', *Z), *ž, *ž', *z̄ (incl. *z̄, *z̄, *z', *Z), *ž, *ž', *z̄.

Among the word-medial consonants I distinguish between "weak consonants" (*ʔ [incl. *ʔ and *ʔ], *ɸ [incl. *ɸ], *g, *ɣ [incl. *Γ], *h, *H [incl. *H, *H₁, *H₂], *ħ, *q, *x [incl. *X], *w and *y) and "strong consonants" (all others).

The entries are arranged as follows:

[1] The basic arrangement: according the initial consonants and the first word-medial strong consonants. If there are no strong word-medial consonants, the weak consonants (according to their place in the alphabet) are taken into account instead.

[2] Within each group of entries with the same initial cns. and the same medial strong consonant the entries are arranged as follows:

- (a) first those without any additional consonants,
- (b) those with a weak cns. preceding the word-medial strong one,
- (c) those with a weak cns. following the word-medial strong one,
- (d) those with a third strong cns.

If in a N etymon in the medial position (Inlaut) there are two weak consonants and no strong one, the priority of one weak consonant over the other (as criteria for alphabetical order) has been established according to the fate of these consonants in daughter languages. For instance, in N *k̄ A ħ w ∇ 'seize, grasp, hold' the consonant *w has survived in Kartvelian and Dravidian, while the laryngeal was lost, therefore the entry was placed among the *k̄-w-entries.

[3] Within each group of entries with identical consonants the entries are arranged according to the first vowel. Order of vowels: *a (incl. *A), *ā (incl. *æ), *e (incl. ê and *E), *i, *o (incl. ô), *u (incl. *U, *û, *î, *â), *ü, *∇.

The entries with consonants of doubtful identity (those within the brackets []) and of doubtful presence (those with the brackets []) are treated as those with regular consonants. The optional second element of a Nostratic

word (that within plain brackets ()) is not taken into account in the order of the entries.

The signs "(₁?)" and "(₂?)" mean that among the compared roots of the descendant languages only one (in the case of "₁?") or only two (in the case of "₂?") may be considered certain. If two language families are compared, their presumably common N etymon (although not certain) may be preceded by "?₂".

'↑' = anaphoric sign "the above-mentioned meaning of the same word\morpheme"

The sign μ means that the form in question is an innovation.

The signs ?μ means that the indicated form or word is doubtful from the morphological point of view

U. SYMBOLS AND ABBREVIATIONS

§ 1. Phonetic symbols and other signs use in the etymological entries

§ 1.1. Introduction

§ 1.1.1. **Generalities.** In my papers I distinguish between transcription (rendering the phonemes and allophons of the language in question) and transliteration (rendering the characters of the original script). For transcription (as well as for reconstructions) a unified transcription script is used: a, b, c, d, e, etc., while for transliteration (as well as for rendering the original Roman spelling of the language in question and for literal quoting of other scholars in their own notation) a special transliteration-quotation script is used: \bar{a} , \bar{b} , \bar{c} , \bar{d} , \bar{e} , etc. Wherever it is necessary to distinguish between phonemic and phonetic transcriptions, the former is denoted by solidi (slant lines) and the latter by square brackets, e.g. Nen F /mań/ [mäń] 'I'. Morphophonemic transcription is denoted by broken brackets [], e.g. Old Indian $\bar{s}p\bar{a}\bar{t}$ [spaś-s] 'beholder', Kota tot [tols] 'full year, anniversary'. These brackets are used also when a morphophoneme is phonetically reduced to zero: Rf Tm $\bar{\theta}am\bar{\gamma}\bar{a}$ [r]^θ 'woman', uřu[r] 'to go'. For Oscan, Umbrian, Gaulish, Punic and other languages of the I mill. B.C.E and the early I mill. C. E. (as well as for Guanche) a special script (font) "A, B, C, D" is used for the original Latin alphabet of the sources (capital letters), while the transliteration script " \bar{a} , \bar{b} , \bar{c} , \bar{d} " is used for rendering the Oscan, Umbrian and Phoenician alphabets. "EM:" means "e-mail equivalents" (used by me and some of my colleagues in e-mail). But for proper names of these languages (e.g. Gaulish) (if preserved in Latin sources) the usual spelling with capital and small letters of the "transliteration script" is used (e.g. Gl Remos).

A special sign: The sign ∂ (before the symbol of the source) indicates that the transcription of the author in question is indicated with Dolgopolsky's modification (interpretation). This sign before the semantic definition means that the definition is reformulated rather than quoted word by word.

§ 1.1.2. The transliteration is either traditional (for languages with long scholarly tradition of transliteration, such as Old Indian, Avestan, Gothic etc.) or partially approaching our transcription system (e.g. for Egyptian we use z, s, ħ, χ, x, c and ʒ instead of EG's s, ś, ḥ, ḥ, ḥ, t and d respectively, for the ancient Semitic languages we use ħ, χ, ʁ, θ, δ, θ and ê instead of the traditional ḥ, ḥ, ġ, t, d, z and d of the Orientalistic transcription; Arabic tamarbuta δ is transliterated as ḥ (but transcribed as -at-). For Tamil, Malayalam, Kannada and Telugu we use the traditional indological transliteration. The sign $\bar{a}ytam$ of the Classical Tamil script is reproduced as \bar{a} : (for its meaning cf. MeenS HTL 53, 68-72 and An. GTJ 11). On Coptic see below **Transliteration of Coptic Letters**. For Classical Armenian I usually use transcription script, but in words with letters and digraphs of controversial reading ($\bar{t}\bar{e}$, $\bar{o}\bar{o}$, $\bar{h}\bar{l}$ i $\bar{\omega}$) the transliteration is preferred. The sign $\bar{\cdot}$ precedes translations quoted from a glossa or from an ancient\medieval

dictionary (e.g. Gk.[Hs.] ἄρουα· χορδή 'gut(s)', Pru [El.] $\text{a l n e} \cdot$ "Tyer" 'beast', sc. Pru $\text{a l n e} \cdot$, translated in Elbing's dictionary (\approx 1400 C. E.) as T y e r 'beast'). Unlike in the Gk sources (and for technical reasons) the sign \cdot is separated from the preceding word, e.g. Pru [El.] $\text{a l n e} \cdot$ "Hindin" rather than Pru [El.] $\text{a l n e} \cdot$ "Hindin". If the quoted translation (e. g., of Prussian or medieval Celtic lges) is the Latin script of the sources, it is printed here with a special quotation script (a, b, c, d, e, f, g, h, i, j, k, l, m, n, o, p, r, s, t, u, x).

§ 1.1.3. For some languages a kind of super-dialectal transcription or transliteration has been used. In transcribing Arabic, the sign ğ is used to denote a phoneme (spelled as ج) pronounced [g] in Northern Egypt, [ğ] in Sudan, [ǰ] and [ǰ̣] in the rest of the Arab world. For Syriac a super-dialectal transliteration is used combining the vowel distinctions preserved by West Syriac dialect and script (vocalization signs) and lost in East Syriac with the distinctions preserved in East Syriac script only. Thus, the sign \bar{e} is used for a vowel preserved as \bar{e} in Sr E and changed into \bar{i} in Sr W, while for the vowel pronounced e in Sr W ("rəḫāṣā") the sign ε is used here. The sign \bar{a} denotes the vowel \bar{a} of Sr E and o ("zəḫāṣā") of Sr W.

For New Persian I prefer the transcription of B. Miller and V. Rastorgujeva to the traditional one. The new transcription reflects the transformation of the former quantitative opposition of vowels into a qualitative one, but still with preservation of the vowel length ($\bar{a} \leftrightarrow a > \bar{u} \leftrightarrow \bar{ä}; \bar{i} \leftrightarrow i > \bar{i} \leftrightarrow e; \bar{u} \leftrightarrow u > \bar{u} \leftrightarrow o$), so that traditional $\bar{a}, \bar{i}, \bar{u}, a, i, u$ have changed into $\bar{a}, \bar{i}, \bar{u}, \bar{ä}, e, o$ [cf. Rast. GPJ 616-70]; EarNPrs \bar{e} (spelled as \bar{i}) > NPrs \bar{i} (loss of the EarNPrs opposition $\bar{i} \leftrightarrow \bar{e}$).

§ 1.1.4. No distinction is made here between fricatives and spirants (in Martnet's terminology: NE t h in t h i s is a fricative, while Sp d in n a d a is a spirant [Mart. DPh § 2.21, TBC 39-42]). Although this distinction is phonetically justified, the sources usually do not distinguish between them, so that without direct observation we are unable to draw conclusions in this respect. Wherever possible, we can denote the spirants by an underline below a letter for fricatives: Sp n a d a [$^1\text{n a d a}$]. If the spirants are very weak, we use a superscript letter (ʃ in Rif Berber, ʃ in dialects of Vogul).

§ 1.1.5. In our transcription we usually do not distinguish between two types of hushing sibilants: apico-alveolar and predorso-alveolar (for lack of information about it in the description of languages and in dictionaries, as well as because no phonemic opposition is involved).

§ 1.1.6. Reconstructions of proto-languages are given either in the unified transcription (as described below), or in transliteration script \mathfrak{a} , \mathfrak{b} , \mathfrak{c} , \mathfrak{d} (if reconstructions of other scholars are quoted in their own notation). If a proto-language (e.g. pA, pM, pD) does not distinguish between orders of affricates, I transcribe them as \mathfrak{c}^2 (for traditional pA and pM \mathfrak{c}^2 , pD \mathfrak{c}) and \mathfrak{z}^2 (for traditional pA and pM \mathfrak{z} or \mathfrak{j} , pD \mathfrak{j}), in order to avoid unjustified identification of the affricates as hushing (\mathfrak{c} , \mathfrak{z}) or hissing (\mathfrak{c} , \mathfrak{z}). In pT and pTg the phonemes usually interpreted as \mathfrak{j} -, \mathfrak{c} , Tg \mathfrak{z} are likely to be (in my opinion) palatal stops, therefore I transcribe them as \mathfrak{j} and \mathfrak{c} . The pFU and pU phonemes \mathfrak{z} and \mathfrak{z} - (of the FU transcription) are lateral fricatives and are transcribed as \mathfrak{z} and \mathfrak{z} . But the phonetic nature of the pU and pFU initial \mathfrak{z} - remains obscure (it cannot have been a voiced obstruent), therefore I transcribe it by \mathfrak{z} a special sign \mathfrak{z} .

§ 1.1.7. I am aware of the trouble that my symbols (not found in regular computer fonts and in printing offices) may cause to those willing to quote from this ductionary. Therefore I propose quotable equivalents for my symbols. In § 9 they follow my symbols and are marked by the sign "Q".

§ 1.1.8. In the following lists of symbols we do not include obvious symbols based on Latin letters (such as \mathfrak{b} , \mathfrak{d} , \mathfrak{t} , \mathfrak{a} , \mathfrak{o} , etc.).

§ 1.1.9. Those colleagues who cannot print subscript and superscript characters (in quotable equivalents of my transcription) may replace them by letters in italics (e.g. $\mathfrak{c}2$ for \mathfrak{c}_2), which is a less desirable option.

§ 1.2. Transcription in pN reconstructions

The generally known transcription letters with obvious meaning (such as \mathfrak{d} , \mathfrak{k} , \mathfrak{l} , \mathfrak{m} etc.) are not explained here.

Here the traditional notation of the IE comparative linguistics is used, with the following exceptions:

in the aspirated consonants the sign of aspiration is a superscript ^h rather than h (*b^h, *d^h, *g^h, *ǵ^h, *g^{ʷh}, *p^h, *t^h, *k^h, *k̂^h, *k^{ʷh} for the traditional *bh, dh, etc.).

*y instead of the traditional *j or *j̣.
