If it belongs here, its *i may be accounted for by regr. as. caused by the N vw. *i of the second syllable. IS reconstructed the N etymon as *maɣr∇, which is based on an untenable rec. of the Tg √ with *aɣ. Closer examination proves that there is not enough ev. to reconstruct here a cns. *ɣ. The only apparent ev. is the diphthongoid ^he in Lm in the verb m^herɜn- v. 'marry' (of a woman) and in the related Lm nouns m^herɜn 'marriage (of a woman)' and m^herɜnnɜ 'bride' (STM I 538-9, LW 690-1). But acc. to the sound laws established in Tg historical phonology (Ci. and Mng. TS), the Lm diphthongoid ^he goes back not to the pTg diphthong *j̥a (which, acc. to IS, goes back to N *aɣ), but to the pTg vw. *ī, hence the Tg verb in question must be reconstructed not as *mj̥ar∇-, but as *mīrɜ-n- 'marry' (of a woman) (whence the above-mentioned reflexes in Ork, Ul, Ewk and Lm) (F..Ci. 109, Mng. TS 34). As to the Tg diphthong *j̥a, it regularly yields quite a different vw. in Lm, namely ^uæ (sc. æ with palatalization of the preceding cns.) (Mng. TS 34). IS supposed that *-NA marked pl. of animate nouns only; this hyp., although not immediately convincing, deserves investigation. The hyp. of the opposition of *-NA to {IS} *-t∇ (pl. of inanimate nouns) is based on unproved (and probably erroneous) interpretation of {IS} *-t∇ as connected with inanimateness (see N *t∇ [postnominal marker of plurality]) ◇ ≈ IS II 94-6 [no. 333] (*-NA, pl. suffix of animate nouns), Sin. This Masoretic misinterpretation is responsible for the strange vocalization (with unexpected ō and lack of gemination of ç). KB 676 preserved the traditional Masoretic vocalization as נְעַץ nō'çā, but accepted (after G. Hölscher) the semantic interpretation of נְעַץ nççh as 'female falcon'. The LXX translators were probably not sure about this difficult place and preferred to transcribe it (instead of translating) as ασυδα καὶ νεσσα. An argument for the denom. origin of the stem for 'bless' is the very fact that it is used almost exclusively as a D-stem (as well as a L-stem, which is its variant) and is almost never used as G (basic stem) except for the pp. *b̄arīk- ~ *b̄arūk- 'blessed one' (> BHb b̄ārūk, Aram b̄arīk etc.), which was actually a derived adj. ◇ Tg and M suggest that the vw. after *r of the N word was labialized. Obviously the NaT prn. *sæ̃n / *sin- results from generalization of the stem for the obl. cases, which goes back to the pA genitive *si-n̄i¹ < pre-A **si-nü (?) < N *ś'ü¹ nu (*ś'ü¹ + marker of genitive). It is not clear why in most T lges we find *æ̃ in *sæ̃n for the expected *i. The vw. *æ̃ may have been induced by the ass. infl. of the vowel of some case ending followed by generalization of the allomorph *sæ̃n- throughout the paradigm of the obl. cases (*see* Doerfer: "Alle Unregelmäßigkeiten bei der Deklination der Personal-pronomina lassen sich durch Assimilation erklären" [Dr. Tbs 214]). UJS 98) reconstructed OT s̄iz 'you' (pl.) with a long vw. without explicit justification of their conjecture; most probably the reason is the *plene* spelling سيز s̄yz in MhK (OT Kr), but even if this length (not confirmed by either Turkic Runic or Uyghur script of OT) did exist in the OT Kr prn., it could not go back to pT or NaT (on the ev. of the Tkm reflex [short i in Tkm θið 'you' pl.]). The vw. i in Chv e-z_īr 'ye, vos' does not necessarily provide ev. of ppT *ī, as shown by M. Räsänen (Rs.
