ɖ̣ = uvularized ("emphatic") d, like Modern Standard Arabic ض.

ɖ̣̌ = postalveolar (cacuminal or retroflex) d.

ɖ̣̣̌ = alveolar d (in Dravidian) (= ɖ̣̣̌ in Indological transcription).

ð (= ɗ̣) = voiced fricative dental consonant (English th in this) or dental spirant (in Martnet's terminology) (Spanish ɗ in nada).

ð̣ = uvularized ("emphatic") ð, like Arabic ظ.

ð̣̂ = lateralized uvularized ("emphatic") ð, like 8th cent. Arabic ض.

ɸ (= ɸ̣) = voiceless fricative bilabial consonant (bilabial f).

ɢ = weak ɢ (e.g. in the word-final position in Kalmuck)

ɢ̣̣ = injective glottalized or preglottalized ɢ (Ldf.'s voiced "larynhealized" ɢ)

ɢ' = consonant described as "voiced ejective ɢ".

k^{\prime} = fortis k

k_{χ} = velar affricate with a weak initial consonantous element. \mathfrak{m}_0

\acute{l} = palatal (or palatalized) l , like Italian gli in $\upsilon o gli o$ (= [IBA] Δ)

$\}l$ = postalveolar (cacuminal or retroflex) l .

ł = velarized l (like in Russian $л$).

$\}l_0$ = syllabic l

ɸ = voiceless l .

ɸ_c = voiceless $\}l$.

λ = a special type of palatal l (different from \acute{l}), as in U and FU, where $*\lambda$ stands for the traditional (FUV) $*\delta^{\prime}$ - (in the word-initial position).

ɾ = a consonant (flap or tap) that is intermediate between r and l (Loubignac's \check{l} in ZAS), or a phoneme without phonemic distinction between r and l (as in proto-Agaw).

\mathfrak{m}_0 = syllabic m

\underline{m} - voiced bilabial consonant with neutralization of the feature of nasality (with allophones [m] and [b]), as in pT.

\acute{n} = palatal (or palatalized) n .

\mathfrak{n}_0 = syllabic n

\underline{n} = alveolar n (like Tamil \underline{n}).

\grave{n} (= η) = postalveolar (cacuminal or retroflex) n .

N = nasal consonant with phonologically neutralized place of articulation (always homorganic with the following consonant).

ν = Old Telugu ardhānusvāra (a nasal consonant [word-final n , preconsonantous N] that is optionally lost in certain environments, e.g. $kalavgu = kala\eta gu \sim kalagu$ 'he disturbed').

η = velar or uvular nasal consonant (like ηg in English $long$).

p^{\prime} = ejective p .

p^{\prime} = fortis p

p^{\prime} = lenis p

q = voiceless uvular stop (like Arabic $ق$).

q^{\prime} = fortis q

q^{\prime} = lenis q

q^{\prime} = ejective uvular stop. Q : \dot{q} (a sign that is technically easier than q^{\prime}).

r_1 = uvular trill (like German r).

r_0 = syllabic r

\bar{r} = long r (incl. Armenian \mathfrak{r} [long trilled r]).

ʃ̣ = palatalized (or palatal) vibrant.

ʀ̥ = trilled r (with phonemic opposition to ʀ).

ʀ̥ = alveolar trill (in contrast to post-dental); ʀ̥ = ʀ̥ of Dravidianist notation.

ʀ̣ (= ʀ̣) = postalveolar (retroflex) r (Dravidianistic ʀ̣, ʀ̣).

ʀ̥ = obstruent r (like Czech ř).

R = Old Scandinavian (presumably palatalized) kind of r < *s.

R = voiceless r (like Moksha Mordvin рх).

ʀ̥ = voiceless alveolar trill (like Konda {DED} R̥).

ʀ = cerebral flap or tap (like Spanish r in carra, or like Hausa r in sarki)
(= {IBA} ɹ)

ɹ = uvular flap or tap.

s = denotes both the apico-alveolar s (as in French, Russian, and most other European lgs.) and the postalveolar s (as in Spanish, New Greek, Finnish, and Estonian). The difference between both of them has proved to be irrelevant in Nostratic studies (so far).

ṣ (in proto-Kartvelian) = weak *s (> Georgian s, Megrelian and Laz zero).

ṣ̥ = voiceless hushing sibilant (like English sh).

ṣ̥ (in proto-Semitic) = weak *š (> š in Ak, but h, ʔ and zero in most WS lgs.).

ś = palatal (or palatalized) s (e.g. like Polish ś).

ṣ̣ (in proto-Kartvelian) = {K, FS} *s₁ (> G s, Md, Lz, Sv ṣ̌).

ṣ̣ (in proto-Kartvelian) = {K} *(s₁) (> Svan ṣ̌, zero in Georgian and Zan).

ṣ̣ = voiceless lateral consonant. Q: s₄

ṣ̣ = uvularized ("emphatic") s, like Arabic ح .

ṣ̣ = apico-alveolar s with flattened body of the tongue (like Toda ṣ̣ in BE's transcription of Dravidian)

ṣ̣̣ = apico-alveolar palatal (in Monguor, = {SM} ṣ̣̣)

ṣ̣̣̣ = infralabialized voiceless domal infradental sibilant (as in Twi and Jibbali; Johnstone's ṣ̣̣̣).

ṣ̣̣̣ = postalveolar (cacuminal or retroflex) s.

ɺ = voiceless palatal fricative (= ɺ̣, ɺ̣̣ of Solon [transcription of Poppe, SSTMJ & Ivanovskij], Kildin Lappish j [in the new East Lappish alphabet of 1982] and Moksha Mordvinian ѝх).

ɺ̣ = ejective t.

ɺ̣̣ = fortis t

ɺ̣̣̣ = lenis t

ṭ = postalveolar (cacuminal or retroflex) t (= [IBA] ṭ; > ṭ̄ and ḍ̄ in the transliteration of SD lges and Telugu)

ṭ̄ = alveolar t (in Dravidian lgs.) (= ṭ̄ of the Indological transcription).

ṭ̄ = uvularized ("emphatic") t, like Arabic ط. Q: ṭ₁₂ (or a less specific notation: t̄")

*ṭ̄ (= ṭ̄) = lenis t

ṭ' = fortis t

θ (= ṭ̄) = voiceless dental (or interdental) fricative (like English th in thin).

θ̄ = ejective θ.

ʋ = labial approximant.

χ (= k̄) = voiceless velar fricative (like Russian χ).

χ̄ = a weak χ-sound (like θifriχθ in Izn {Rn.}).

χ̄ = voiceless uvular fricative (like Spanish j and Arabic ح) = ḥ̄ of the Orientalistic Transcription.

ɟ = palatal approximant (like ɟ in English ɟeɪs).

z = voiced hissing sibilant. Denotes both the apico-alveolar z (as in French, Russian, and most other European lgs.) and the postalveolar z (as in New Greek). The difference between both of them has proved to be irrelevant in Nostratic studies (so far).

ẓ = voiced hushing sibilant (like French j).

ẓ̄ = voiced hushing fricative with a broad slit (as in Zng: {TC} "fricative sonore avec un faible chuintement", = {TC} Z̄).

ẓ̄ = voiced palatalized sibilant (like Polish ź).

ẓ̄ = uvularized ("emphatic") z, like in Berber (ẓ̄ of the Orientalistic Transcription).

ẓ̂ = voiced lateral fricative.

ʒ = voiced hissing affricate (= d̄z̄).

ẓ̄ = voiced hushing affricate (like English j).

ẓ̄ = voiced palatal (or palatalized) affricate (like Polish d̄ź).

ẓ̄ (in proto-Kartvelian and possibly in Jurchen) = Klimov's ẓ̄₁ and Mudrak's Jurchen ẓ̄.

ẓ̂ = voiced lateral affricate.

ẓ̂ = voiced lingual affricate (without phonemic distinction between ẓ̂, ẓ̂̄, ẓ̂̄̄ and ẓ̂̂) or a voiced palatal or sibilant consonant (without phonemic distinction between affricates and j or between sibilant affricates and pure [fricative] sibilants).

$\frac{2}{3}$

∅ = zero consonant

Clicks: The clicks are rare in African languages of Nostratic origin (they exist in some South Cushitic languages only). Nevertheless in view of further research of languages of Africa I find it useful to formulate my proposal of transcription of clicks.

! (after the letter) - a sign for clicks, namely:

b! - voiced bilabial click,

č! - voiceless palatal (palato-retroflex) click,

ĉ! - voiceless lateral click,

d! - voiced addental click,

ḍ! - voiced alveolar click,

ʝ! - voiced palatal (palato-retroflex) click,

ĵ! - voiced lateral click,

m! - nasalized bilabial click,

n! - nasalized addental click,

ṅ! - nasalized alveolar click,

ň! - nasalized palatal (palato-retroflex) click,

p! - voiceless bilabial click,

t! - voiceless addental click,

ṭ! - voiceless alveolar click;

aspirated and glottalized clicks should be represented by adding the signs of aspiration and glottalization to the symbols for clicks (e.g., t!^h, č!^h, ṭ!^h, ĉ!^h); retroflex clicks can be designed by adding the sign of retroflexity to the signs of addental clicks: ṭ!, ḍ!, ṅ!).

COVER SIGNS (UNCERTAINTY SIGNS) FOR CONSONANTS IN RECONSTRUCTIONS

| "or" (b|p means "b or p").

ʔ (in reconstructions) = ʔ|h

ʌ = H|w|y.

ʃ = ʃ|ʒ.

Ĉ = unspecified affricate

- C_1 = unspecified voiceless (or lenis) affrivate
 C_1' = unspecified fortis affrivate
 $\underline{c} = \dot{c}|\dot{c}$.
 $\Gamma = \Psi|g$.
 H = cover sign: unspecified laryngeal (ʔ|h|ʕ|h|χ|ʁ).
 H_1 = cover sign for "weak" laryngeals (ʔ|ʕ|h).
 H_2 = cover sign for "weak" laryngeals, including h (ʔ|ʕ|h|h).
 H = cover sign for $H|g|q$.
 H = very weak pharyngeal cns. (in Udihe)
 K = cover sign for $g|k|k|q$
 $\underline{K} =$ cover sign for $k|k|q$, (for lges without q) $k|k$; (for pA) $k'|k'$
 κ = cover sign for $g|k$
 L = unspecified lateral sonorant.
 \bar{l} = cover sign for $l|l$
 N = unspecified nasal consonant (other than $*m$).
 $\underline{N} =$ cover sign for $n|n'$
 P = unspecified labial stop.
 $\underline{P} = p|p'$
 $Q = q|g$.
 $R = r|r'$.
 S = unspecified voiceless sibilant (or lateral obstruent) ($s, \acute{s}, \check{s}, \hat{s}, K \grave{s}$).
 $\underline{S} =$ unspecified glottalized sibilant (in proto-Semitic: $*\dot{c}, *m, *\hat{s}$)
 T = unspecified dental stop; in T: $t'|t'$ (the only dental stops)
 $\underline{T} = t'|t'$
 $\delta = w|y$.
 $X = h|\chi$.
 $\dot{X} = x|\chi$.
 $\ddot{X} = \chi|\Psi$.
 Z = unspecified voiced sibilant.
 $\underline{Z} =$ unspecified voiced affricate.
 \perp (in reconstructions) is an unspecified consonant.
 $\lfloor \rfloor =$ for transliterated letters that are not pronounced (e.g. Sr $\lfloor \text{ʔ} \rfloor n \bar{a} s$ with a "deaf" initial ʔ).

In cases of neutralized opposition the letter without diacritic signs (denoting the feature which is neutralized) is used. For instance, in pT words with intervocalic voiced obstruents (where the opposition $*t' \leftrightarrow *t$ - is

neutralized) we use a plain *t-. If the neutralized opposition is between phonemes denoted by different letters, we may use /, e.g. p/b.

VOWELS

a i u e o = ultra-bref. vowels (in Kalmuck {Rm/})

Ḃ = "patach furtivum", sc. an epenthetic Ḃ (appearing in Hb between a long vowel and a following word-final laryngeal cns.: 'rū^Ḃḥ 'wind, spirit'), as well the ultra-short Ḃ (Hb₁[ḥat'aph-pathach]).

ɑ = low back vowel (back a). The same sign is used to denote the slightly labialized low back vw. in NPRs.

α = a vowel in pre-IE from which alternating IE *e/o/zero have developped; ultra-bref (reduced) low back vowel (e.g., in Lamut [= Ḃ of STM])

a = ultra-short a

дархан { = ultra-short or reduced low vowel

ä (= æ) = low front vowel.

æ = [1] in attested lgs.: = ä.

æ = [2] in reconstructions: = ä|e.

Ḃ̄ = vowel intermediate between ä and a..

Ḃ̄^o = labialized low vowel.

Ḃ̄ = ultra-short Ḃ̄ (in Hebrew and Aramaic)

Ḃ̄ = high a.

Ḃ̄ = low-mid back vowel (= IPA ʌ), like ʊ in English ɒ ʊ t.

α = short Ḃ̄ (shorter than the regular Ḃ̄ [in Kalmuck)

ɑ = ultra-short Ḃ̄.

ä = ultra-short ä.

ʌ = low-mid central vowel (= IPA ʌ); in Korean ʌ = Korean {Lee} ʌ, {Starostin} ä̃, {Ramstedt} ǣ.

Ḃ̄^o = slightly labialized e ("leichte spaltformige Labialisation")

Ḃ̄ = η, closed e

e = ultra-short e

ε = ultra-short ε (in Hebrew and Aramaic)

ε = low-mid front vowel.

ɜ = central mid vowel (= IPA and Africanistic ə, FUT e̞, Wiklund's ɘ, Sammallahti's ɛ̥, Smedt and Mostaert's e̞)

ɜ̟ = slightly labialized central mid vowel (Genetz's ɘ).

ə = ultra-bref (reduced) central vowel, or ultra-bref vowel without phonologic distinction of quality; in Chuvash ə = orthographic ɛ̣; = Sammallahti's ɘ.

ə̟ = ultra-bref (reduced) central labialized vowel

ɘ (= ə₁ in an earlier var. of transcription) = back mid vowel (like Estonian õ) = IPA ʏ (or ʌ of some authors); in Korean ɘ = Ko {Lee} ə, {Starostin} ə, {Ramstedt} e̞; in Svan (acc. Tuite's description) ɘ = ɘ = ə of the traditional transcription.

ɨ = high e.

ɨ̟ = slightly labialized i ("leichte splattformige Labialisation")

ĩ = slightly reduced i (as in Kalmyck)

ɨ̣ = reduced (ultra-short i (e.g. in Kalmuck)

ɨ̣ = palatal glide of a diphthongoid.

ɨ̣ = low i (like i in English ɪ ɪ̣); = ɨ̣ (i in the lower series of vowel harmony)

ɨ̣ = high mid vowel (like Russian ɨ̣).

ɨ̣ = lowered high mid vowel (low ɨ̣).

ɨ̣ = high back vowel.

ɨ̣ = labialized low-mid back vowel (like British English o in ɒ oŋ).

ɨ̣ = ultra-short ɨ̣ (in Hebrew and Aramaic)

ö (= œ) = labialized front mid vowel (labialized e).

ọ̈ = labialized front low-mid vowel (labialized ε).

ọ̈ = vowel intermediate between ọ̈ and o.

o = ultra-short o

ω (= ọ) = high o, intermediate between o and u.

ø = centralized o.

◦, ◦ = non-phonemic vocoid (= {Bi.} ʔ)

◌̥ = prenasal voiceless vowel glide (as in Lappish) and postnasal voiceless ultra-short vowel (as in Nenets); the same sign is used when the final part of the preceding vowel is voiceless (as in Lp L, as described by Wiklund: ◌̥ = Wiklund's ɘ); ≈ ɜ̥.

u = labialized high back vowel.

u = ultra-short u

ụ = low u.

ü = labialized high front vowel (labialized i), like German ü and French u.

Û = labialized lowered high front vowel (labialized u).

Û = vowel intermediate between ü and u.

u̇ = centralized u.

ụ = labial glide of a diphthongoid (e.g. н^uоs нoц in Russian).

ʊ = ultra-short back vowel (= ă̇ of the Finno-Ugric Transcription); ʊ = Chuvash ă̇, Volga Tatar and Bashkir short ʊ, High Cheremis ʊ, K1 ultra-short open back vw.

ʊ̣ = Volga Tatar and Bashkir ọ, K1 ultra-short open labialized back vw.

ʊ̇ = reduced I-like vw. (in Lamut)

ɐ = ultra-short (reduced) front vowel; ɐ = Volga Tatar, Bshk ə, e (after a consonant), pSm {Hl.} ä̇.

ɐ̣ = Volga Tatar, Bashkir ɐ̣.

∅ = zero phoneme

NB: 1. Instead of Lytkin's proto-Permian *q̣, *q̇, *q̈, *ẹ, *ė, *ë, *ọ, *ȯ, *ö and *ε̣ we use *ɟ, *o, *ö, *ε, *e, *j̇, *ö̇, *j̈ and *ä̈ respectively.

2. In Sr W there is only one non-ultra-short e-vowel. I transcribe it as ε because in Sr E there are two non-rultra-short e-vowels: a more open ε (usually corresponding to Sr W ε) and a more more closed e (usually going back to *aɥ).

COVER SIGNS (UNCERTAINTY SIGNS) FOR VOWELS RECONSTRUCTIONS

IN

A = a|ä.

æ = (in reconstructions) = ä|e.

Ė (= FUT ǎ̇, = unspecified front vowel

ô̇ = o or u

U̇ = unspecified round vowel.

Î̇ = unspecified high vowel (u|ü|i|I).

i|ɪ

â̇ = unspecified back vowel (a|o|u) (= FUT ʌ̇)

û̇ = u or ü

∇ (or √) is an unspecified vowel.

C = a generalized sign for "consonant" used in structural formulas.

All this refers to transcription, rather than to transliteration or reproducing the national (Roman-based) script. The transliteration and the national Roman spelling are (and should be) quoted in their traditional form.

In patterns of word and root structure **C** is a general sign for consonants, e.g. "the Arabic nominal pattern ʔa-CCaC- ".

For more details about the cover signs in the pN reconstruction cf. above § 8.

BOUNDARIES

˘ = syllable boundary (both in transcription and transliteration).
= word boundary.

DIACRITICAL SIGNS

(1) WITH CONSONANT LETTERS

Superscript consonant letters are always used to denote weak consonants (θ , ϑ , \hat{n} , \varkappa , h , etc.). The superscript letters θ , r denote extreme reduction of a consonant, like in some dialects of Rif Berber: $\theta a m \vartheta \bar{a} r \theta$, $\theta a m \vartheta a r \theta$ 'woman', $i f f \bar{a} \vartheta$ 'he went out'. Reduction to zero is denoted by using morphohonemic brackets []: $\theta a m \vartheta \bar{a} [r] \theta$ 'woman'. If a superscript consonant letter is adjacent to a letter for a homorganic consonant (e.g. in affricates: $^k \varkappa$ in Vg dialects and in Ordos), it denotes a weak consonantous elements of an affricate.

Subscript consonant letters (e.g. in Lp Kld $\nu \underset{\cdot}{u} a l l a \delta$) denote very weak consonants.

˙ (under letters for stops and sibilants) - glottalization (both ejective and voiced injective), including preglottalization. In the N reconstructions it denotes an emphatic articulation (without commitment as to its exact phonetic articulation: glottalization, aspiration or tenseness).

˘ (under letters for fricative consonants \hat{h} , ς , f ; \vee) - plosive consonant (stop): \hat{h} (plosive \hat{h}), ς , f , \vee ;

˘ (preceding the letter) - preglottalization (as Sq $\text{'}\varsigma$, $\text{'}\hat{h}$, Lp Δ $\text{'}\rho$, $\text{'}\tau$) or injective glottalization (especially of voiceless consonants: $\text{'}\rho$, $\text{'}\tau$).

◦ (after the letter) - tense non-aspirated (in the NrCs languages, in Zng).

˘ (after the letter: $b^{\text{˘}}$) - unreleased stop (stop without explosion, as in Vietnamese and Ndam); cp.] = unreleased undiscriminate stop (see above).

- ˤ (ḏ, ẓ, ṭ) - uvularization ("emphasis", as in Arabic and Berber).
 ˀ (after the vl. letter: ṭˀ, kˀ, pˀ, cˀ etc.) - fortis ([cf. IS AG 242-3]).
 ˁ (after the letter: ṭˁ, kˁ, pˁ) - lenis, lax ([cf. IS AG 240-1]); in Azm ˁ denotes lax sonorants ("relâchées") mˁ, nˁ, ŋˁ.
 ᵀ (after the letter: ṭᵀ, kᵀ, pᵀ) - aspirate.
 ᵀ and ˀ (preceding the letter: ᵀṭ, ᵀp, ᵀk = ˀṭ, ˀp, ˀk) - preaspirate.
 ˀ (after the letter: bˀ, gˀ, dˀ, jˀ, zˀ, rˀ, lˀ, mˀ, nˀ, ŋˀ) - devoiced or half-voiced = FUT small caps.
 ˀ (after the letter: kˀ) - pT half-fortis (k ~ g in Oguz lges [cf. IS AG 341-2]).
 ˀ (after the letter: rˀ, lˀ) - devoiced final part of the consonant (as in Nen F). EM: ᵀ (after the letter).
 ˀ (after the letter) - half-voiced.
 ˀ (preceding the letter) - voiceless consonants with a voiced or half-voiced initial part (as in some dialects of Lp).
 ˀ (under the letter: bˀ, ḏˀ, gˀ, kˀ, pˀ, ṭˀ, qˀ) - fricativity resulting from lenition (fricative variants of phonemes or morphophonemes, as in Hebrew, Aramaic and Berber).
 ˀ under letters for fricatives (β, δ, ʁ, v, h) - lax fricativity (*consonnes spirantes* of Mart. and TBC, such as Sp intervocalic b, d, g = β, δ, ʁ). Lax fricativity resulting from lenition may be also denoted as above (with a dot under letters for stops: bˀ, ḏˀ, gˀ, kˀ, pˀ, ṭˀ, qˀ) if no phonological opposition (bˀ ↔ β, etc.) is involved or known.
 ˀ (e.g. pˀ, ṭˀ) - lax consonants (pT *-p- > -p- ~ -b- in daughter lgs.).
 ˀ - syllabic consonant (l̥, ŋ̥, m̥, etc.).
 ˀ over the consonant letter - weak consonant (intermediate between the consonant and zero), e.g. w̃, ỹ = w, y with weak approximation.
 ˀ, ˀ over the consonant letter = long consonant, including the so-called "long consonants" in Korean and the Nakh-Daghestanian lgs.
 ˀ (under the letter) - open fricative consonant (with broadened aperture).
 ˀ (after the letter) - affricatized or half-affricatized stop (kˀ = affricate k̠x̠, tˀ = a half-affricatized t̠ [intermediate between t̠ and č̠, as Russian т̠]).
 ˀ (preceding the letter) - slightly affricatized fricative consonant (with a weak initial plosive articulation): ˀx̠ = very weak k + x̠.
 ˀ or ˀ with dental consonant letters (tˀ = t̠, dˀ = d̠, ḏˀ) - addental or gingival (in contrast with alveolar) consonant. The traditional symbol ˀ is less convenient because it cannot be combined with the under-dot for glottalization.

ʔ with palatal consonant letters (ç, ʝ) - dentopalatal consonants (intermediate between t and ç, d and ʝ), as in dialects of Lapp.

̣ (ṭ, ḍ, ṇ) - alveolar (in contrast with dental or post-dental) consonant; ṭ, ḍ, ṇ = ṭ, ḍ, ṇ of the Dravidianist notation.

̆ - palatal consonant (e.g. ʃ̆ = [ʃ̆]) (if distinguished from palatalized). But in pIE reconstructions k̆, ğ, x̆ is used (according to the scholarly tradition) for palatalized consonants.

˘ (over the letter: ś˘, ṅ˘, ṷ˘, etc.) - palatality.

˙ (after the letter: k˙, g˙, χ˙) - palatalization.

˘˘, ˘˙ (over the letter) or ˙˘ (after the letter) - weak palatalization (e-
palatalization).

˘˘ (after the letter: k˘˘, g˘˘, χ˘˘) - labialization

˘˘˘ (after the letter: s˘˘˘) - ˘˘˘-labialization (articulated with the upper lip only).

˘˘˘ (in word-initial position before diphthong or vowel) - weak approximant functioning as a ˘˘˘-*glide* (as in dialects of Kola Lapp).

˘˘, ˘˘˘ (over a consonant letter or to its left) - nasalization or (in Chadic) prenasalization of an obstruent (p̃, b̃, d̃, t̃ or p̃, b̃, d̃, t̃) or nasalization of a cons. (ũ, w̃, ɸ̃, ɸ̃).

˘ (ṣ̣, ṇ̣, etc.) = ˘ (ṣ̣, ṇ̣, etc.) - postalveolar or retroflex consonants.

˘˘ over letters for sibilants (ṣ́, ẓ́, ʒ̣) - symbol of infralabialized domal infradental sibilants, like in Central Jibbali (Johnstone's ɕ̣, ʒ̣, ʒ̣) or in Twi (Ghana); ṣ́ = [ɻ] of the IPA transcription.

˘˘ over letters for sonorant consonants (ɰ̣, ẉ, ɳ̣) denotes a glottal stop that is simultaneous with the sonorant.

˘˘ over letters c and ʒ is used to denote lingual affricates without phonemic distinction between hissing, hushing, and palatal: ʒ̣ for a voiced affricate, c̣ for a voiceless affricate, as well as for a palatal or sibilant consonant (without phonemic distinction between affricates and ç or between sibilant affricates and pure [fricative] sibilants, as well as for an affricate without phonemic distinction between voiced and voiceless).

˘˘˘ - vibration (e.g. χ̣ - vibrating χ, g̣ - g with vibration).

! (after the letter) - a sign for clicks, namely:

b! - voiced bilabial click,

ç! - voiceless palatal (palato-retroflex) click,

ç! - voiceless lateral click,

d! - voiced alveolar click,

d! - voiced alveolar click,

- ɟ! - voiced palatal (palato-retroflex) click,
- ʝ! - voiced lateral click,
- ɱ! - nasalized bilabial click,
- ɳ! - nasalized addental click,
- ɲ! - nasalized alveolar click,
- ɳ̠! - nasalized palatal (palato-retroflex) click,
- ɸ! - voiceless bilabial click,
- ɬ! - voiceless addental click,
- ɮ! - voiceless alveolar click;

aspirated and glottalized clicks should be represented by adding the signs of aspiration and glottalization to the symbols for clicks (e.g., t!^h, c!^h, ṭ!^h, c̣!^h); retroflex clicks can be designed by adding the sign of retroflexity to the signs of addental clicks: ṭ!^ɻ, ḍ!^ɻ, ṇ!^ɻ).

The clicks are rare in African languages of Nostratic origin (in some South Cushitic languages only). Nevertheless in view of further research of languages of Africa I find it useful to formulate my proposal of transcription of clicks.

(2) WITH VOWEL LETTERS

˜ denotes nasality: ã = nasal a; in the Slavic languages nasality is denoted by a cedille: ạ = ã.

ɿ denotes retroflex articulation (as ɿ in Chinese ɕ ɿ i, r ɿ i, or ʒ ɿ in American English b ɿ r d [ḅɿḍ])

ᵿ denotes apical pronunciation: ᵿ, ᵿ = apicalized i, u (as ᵿ in some East Lapp subdialects denoted in Sotavalta's and Wiklund's transcription as ᵿ̇, ᵿ̈, or as ᵿ in Chinese ɕ ᵿ i).

˘ (over the letter) denotes creaky phonation of vowels.

˘ (over the letter) denotes middle pharyngealization (as in some Daghestanian languages; such pharyngealization is supposed to have existed in the history of Akkadian) and pharyngealization of vowels in Tuva and Tofalar. NB: ᵿ̇ is a pharyngealized ɿ (Tv ы ы̇), while ᵿ̈ is a pharyngealized i (Tv и ӥ).

ʔ and H (before the letter or between vowel letters) denote "interrupted" and "aspirated" vowels (in Ud, according Zinder and Matusевич) (the sign chosen in accordance with the source: H if the source indicates a kind of h); Krm. treats this "interruption" and "aspiration" as phonemes ʔ and h (transcribed so in quotations from Krm.)

ˊ (ā, ē, etc.) - breathy vowels (vowels with breathy voice) and "lax" vowels ({Bender} Dime)

̣ (under the vowel letter) denotes close vowels (ẹ = η, closed e). In Tg it denotes vowels of the higher series of vowel harmony

̤ (under the vowel letter) denotes open vowels (e̤ = ε). In pTg it denotes the vowels of the lower series of vowel harmony

ˋ denotes retracted vowels (aˋ = retracted a)

ˊ denotes advanced vowels (aˊ = advanced a)

˘ (under the letter) - broadened vowel

˙ (under the letter) - narrowed vowel

ˆ (over the letter) - narrowed vowel with a convexed middle part of the tongue ("gewölbte Mittelzunge", such as ū̂ in Karjalainen's description of Ostyak)

¨ denotes front vowels (ä, ü, ö)

˚ denotes half-front vowels (õ, ı)

̣ denotes glides (English my [maj̣], Spanish bien [bjeṇ], bueno [ˈbuenọ])

̤ (after the vowel letter) denotes devoiced vowels (as in Japanese, Korean, Oromo and Wolaytta prosody)

̥ (e̥, i̥, o̥) - lax vowels (as in Slq: e̥, i̥, o̥ = {KKIH} ε, i [i with subscript <], o; or as in Boni)

̦ (under the letter: e̦, o̦, a̦, etc.) - tense vowels (as in Boni)

Diacritical signs at the beginning of words denote supersegmental features:

ˊ at the beginning a word - supersegmental anteriorization of all vowels of the word (as in Somali),

˘ at the beginning of a word - supersegmental lowering of all vowels (i > i̘, etc.) (as in the Tungusic languages),

˙ at the beginning of a word - supersegmental higher articulation of all vowels (u > u̙, etc.) (as in the Tg languages).

Subscript vowel letters denote anaptyctic and ultra-short vowels (e.g. in Kalmuck, Kurukh), as well as the patach furtivum in Hebrew (rūāḥ = רֹּוּחַ).

Superscript vowel letters ^a, ^ε, ^ɔ denote a/ε/ɔ-colored shva (in Hb and JA: Hb ^ɔחַיִּים = חַיִּים).
 Hb ^ɔחַיִּים = חַיִּים).

Superscript vowel letters (ị, ụ, ọ, ẹ, ạ̈) adjacent to vowels denote glide elements of diphthongoids (e.g. R ^uחַיִּים [n^uoɔ] 'nose', Xlj j^oחַיִּים 'road').

(3) WITH BOTH CONSONANTS AND VOWEL LETTERS

̣ (at the end of a word) - devoiced Auslaut

ꞑ (sc. s u ꞑ a)- syllable boundary, e.g. in MM and MKo (rendering the MKo letter ◦ unless it denotes [h̃] - see Lee GKS 130-1, 150-3).

(4) QUANTITATIVE DIFFERENCES OF VOWELS

Vowel letters without diacritics of length or shortness denote short vowels (in languages with an opposition short vs. long) and normal ("full") vowels (in languages with an opposition normal vs. ultra-short and with a triple opposition long vs. short vs. ultra-short); an exception: special letters for ultra-short (reduced) vowels ə, ɐ, ɪ.

In Bibliography the long vowels (of the original titles of books and articles) are denoted as ā, ē, ō, ū.

˘ denotes a ultra-short vowel (e.g. ä); in languages distinguishing between long and short vowels only (L, Gk, pA) it denotes a short vowel.

Small subscript vowel letters denote ultra-short vowels (almost zero).

Letters followed by ˙ denotes half-long vowels.

Vowel letters with a macron ¯ or with a following colon : denote long vowels.

: (in the formula of a root or a stem) denotes vowel length as part of the formula (e.g. in Sv √:ṭw-, cf. **2486. *wAlAṭṭ** 'run, flee').

letters followed by :: denote ultra-long vowels.

˙ (after the letter) symbolizes "schwachgeschnittene Länge" (in the Samoyed languages).

Letters followed by ˙ denote a short vowel (opposed to a long one), e.g. ā˙.

(5) QUANTITATIVE DIFFERENCES OF CONSONANTS

Long consonants are denoted by double letters (tt) or by a colon : (t:).

Half-long consonants are denoted by the sign ˙.

Ultra-long consonants are followed by the sign ::.

(6) TONES AND STRESS

ˈ (before the syllable) - full stress.

ˌ (before the syllable) - weak stress

" (before the syllable) - strong stress (e.g. phrasal stress).

'' (before the syllable) - secondary stress

The tones are denoted mostly by supralineal signs over vowels, e.g. by signs of the second supralineal level (higher than regular supralineal signs):

ˊ - high tone; in Kor. and Jap. this sign is quoted after Starostin's papers

ˋ - low tone; in Kor. and Jap. this sign is quoted after Starostin's papers

ˊ - middle tone.

ˆ - falling high-to-mid tone

ˆ - falligh high-to-low tone

ˆ - falling mid-to-low tone

ˋ - rising low-to-high tone

ˋ - rising low-to-mid tone

ˋ - rising mid-to-high tone (mid rise tone)

ˋ - high rise tone (as in Wedekind's records of Janjero)

ˋ - very low tone

ˋ - very high tone

_ (after the syllable) - the tone (in ds. of Ko and J) designated by Starostin by a subscript macron: a_ = St.'s a̅

In transcribing languages distinguishing between more than three pitches of tones the first supralineal level is used for the mid low tone (ˋ, e.g. à) and for the mid high tone (ˊ, e.g. á), so that the tones are denoted as follows (a standing here for any vowel): à, à, à, á, á, á, á for very low, low, mid low, middle, mid high, high and very high tones respectively. They may be denoted by subscript numbers as well: à = a₁, à = a₂, à = a₃, á = a₄, á = a₅, á = a₆, á = a₇, falling mid-to-low à = a₄₋₂, rising mid-to-high á = a₄₋₆, etc.

If the tone sign precedes a word (as in MfG), it indicates that the word requires this tone in the preceding word (Brr.'s "ton flottant").

In proto-Slavic reconstructions, in Lt, Ltv and Lv the syllabic intonation (Slavic and Baltic accents) are denoted according to the Slavistic vs. Baltistic tradition.

In transcribing Korean dialects I use superscript L, T and V (preceding the syllable) to designate those tones which are symbolized in St. AJ and SDM95 by capital letters L, T and V (without explaining the phonetic meaning of the symbols).

In transcribing Chinese I use the traditional numeration of the tones (subscript numbers _{1, 2, 3, 4}).

For unwritten languages with expiratory syllabic intonation (like Liv) I use (a highly placed macron) for the even intonation (Endz.'s "gedehnter Ton")

(or leave the syllable without intonation sign), ` (a highly placed gravis) for the falling intonation (initially-strong and finally-weak syllables; Endz.'s "fallender Ton") and ' (after the vowel) for the stød ("Stoßton"). For written lgs. of this kind (Lt, Ltv) we use traditional accent symbols with traditional transliteration.

(7) ADDITIONAL SIGNS

(used in description and reconstruction of languages)

These signs should not necessarily be reproduced by scholars who quote my data. but have no technical possibility to reproduce the characters. If necessary, their meaning may be rendered by words of explanations.

1, 2, 3, 4 - radicals of S, B and Eg roots

↔ - morphological, semantic, or phonemic opposition (L r e g e s pl. ↔ r e x sg., 'land' ↔ 'sea', d ↔ t); in semantic definitions: "opposite of, antonym of" (e.g., 'right' ↔ 'left')

∩ = 'and' (for variants of roots and words); 'or' (for alternative reconstructions)

-, ± = approximately (in semantic definitions and in phonetic reconstructions); ≈ before a reference means that the etymological or semantic interpretations in the quoted source are only partially shared by the present author

≈f = approximate phonetic reconstruction; ≈f before a reference means that the phonetic reconstruction in the quoted source is only partially shared by the present author

⌈ ⌋ - uncertainty brackets: ⌈a⌋ = a or similar.

⌊ ⌋ - uncertainty brackets: ⌊a⌋ = a or nothing.

< > - brackets for silent letters (in transliteration)

1, 2, 3 - these indexes are used for reconstructed or ancient languages in order to distinguish between phonemes with unknown phonetic difference, e.g. OJ 0₁ and pJ *0₁ = OJ ö, pJ *ö (= *□).

÷ - cognate of

* - sign of a non-existing word, form or a non-existing meaning or a wrong reconstruction (quoted by a scholar)

*< - erroneous etymology

*÷ - erroneous etymological comparison with ...; 'not here ...' or 'hardly cognate with ...'

*φ - erroneous phonetic reconstruction

↔ - "contrary to the opinion of...", "compare otherwise"

* - sign of reconstruction

*^o - a reconstruction based on one descendant language (or branch of a family) only

*^{oo} - a reconstruction based on one granddaughter-language only

** - a questionable reconstruction or a result of "internal reconstruction"

* (after a word) - unattested forms (esp. quotation forms: nom. sg., inf., etc.) of a word (reconstructed from the attested forms of its paradigm)

'↑' - the abovementioned meaning of the same N etymon (in cross-references)

σ≡ - a semantic parallel

? - a questionable N etymology, or a questionable cognate

₂ - a N etymology based on two daughter-languages only

?₂ - a N etymology based on two daughter-languages only, with questionable representation in a third language family (or in two other language families)

?φ₂ - a N etymology based on two daughter-languages only, with phonetically uncertain representation in a third language family (or in two other language families)

?σ - a semantically doubtful connection

?φ - a phonetically doubtful connection

?σ,φ or ?φ,σ - a doubtful connection (for semantic and phonetic reasons)

??σ - a highly doubtful connection (for semantic reasons)

??φ - a highly doubtful connection (for phonetic reasons)

?μ - a morphologically doubtful connection (the derivation is not clear, the root structure is deviant, etc.)

¿ - a questionable reconstruction of a daughter-language, a questionable adduction of a lge. or a family of of lgs., or (before '...') a questionable semantic interpretation of a reconstructed or an attested word; 'the sign '¿' before a language name means that the very existence of the form in question is dubious

[¿] - A. Dolgopolsky's doubts about an opinion (semantic interpretation, etc.) of another author

+ = "adduces" (used in references to other scholars).

The arrows → and ← in references or between abbreviations for authors or bibliographical sources (A → B or B ← A) mean that words\roots published (or registered, reconstructed) in a paper A (or by the scholar A) were later repeated (quoted) in a paper B (or by the author B). For instance, "IS I 224 → BmK 261-2" means that the etymology proposed in IS I 224 was later repeated in BmK 261-2; "{BK ← Fr.}" = "{Biberstein-Kazimirky after Freytag}".

(8) OTHER SIGNS

C - consonant (generalized sign used in structural formulas)

∇ - vowel (a generalized sign)

/ / - phonemic transcription (if it is necessary to distinguish between phonemic and phonetic transcription) (see above in this chapter (Phonetic symbols and other signs used in the etymological entries), Generalities, § 1)

[] - phonetic transcription (if different from phonemic transcription) (see above Generalities, § 1)

· - translation within a glossa or an ancient\medieval dictionary (e.g. Gk [Hs.] ἔρπουα· χορδῆ 'gut(s)', Pru [El.] alne· "Tyer" 'beast', sc. Pru alne·, translated in Elbing's dictionary (≈ 1400 C. E.) as Tyer 'beast'). If the translation in a glossa or in an ancient\medieval glossary is in Latin script, the quotation marks are " ", and the text of the translation is in the capital Helvetica script (A B C D...)

✓ - "root".

✓ - consonantous verbal root (in the Hamito-Semitic languages)

✓ - consonantous scheme of a derived verbal stem (in the Hamito-Semitic languages)

✓✓ - consonantous scheme of a word (in the Hamito-Semitic languages)

[(or ✓✓)] - biconsonantous nucleus of a root (in the HS languages)

· - translation within a glossa or an ancient\medieval dictionary (e.g. Gk [Hs.] ἔρπουα· χορδῆ 'gut(s)', Pru [El.] alne· "Tyer" 'beast', sc. Pru alne·, translated in Elbing's dictionary (≈ 1400 C. E.) as Tyer 'beast'). If the translation in a glossa or in an ancient\medieval glossary is in Latin script, the quotation marks are " ", and the text of the translation is in the capital Helvetica script (A B C D...)

- word juncture (used in phonetic formulas)

× - contamination (merger) of roots, stems, or words (**a** × **b** = '**a** contaminated [merged] with **b**')

† - obsolete word, obsolete semantic variant

~ - variant forms.

ᄁ - dialectal variant(s).

/ - apophonic and other morphological variants of a root\stem distributed according to their morphological role; on the meaning of the solidus (/) in the enumeration of languages and dialects see below the chapter "Abbreviations of names of languages, dialects, language families, subfamilies and script systems".

\ = "or", "and\or"

↑ = high style.

↓ = non-standard

† = obsolete.

↳ - ideophonic root (including "nursery words" [Lallwörter])

- o**₁ = an onomatopoeic word\root
o₂ = secondary onomatopoeic associations
 \uparrow = anaphoric sign "the above-mentioned meaning of the same word\morpheme"
 \downarrow = "see below"
 \Rightarrow = "see to the right" (referring to the following part of the same entry)
 \times = contamination (merger) of roots, stems, or words (**a** \times **b** = 'a contaminated [merged] with b')
 $\leftarrow b$ - source of borrowing, borrowed to (**a** $\leftarrow b$ **b** = 'b borrowed from a')
 $\leftarrow b$ - borrowed from (**a** $\leftarrow b$ **b** = 'a borrowed from b')
 $\leftarrow b \mid \leftarrow b$ - borrowed in one direction or another (**a** $\leftarrow b$ **b** or **a** $\leftarrow b$ **b**)
 \leftrightarrow - source of derivation (**a** \leftrightarrow **b** = 'b derived from a')
 $\leftarrow \leftrightarrow$ - derived from (**a** $\leftarrow \leftrightarrow$ **b** = 'a derived from b')
 \rightarrow - a semantic change to ...
 \leftarrow - a semantic change from ... (on the meaning of \rightarrow and \leftarrow in bibliographical references or between names of scholars see above [end of the preceding paragraph])
 $\rightarrow \mu$ - a morphological change to ...
 $\leftarrow \mu$ - a morphological change from ...
 $\equiv \sigma$ - a semantic parallel
 Δ, \exists - in dialects, in a dialect
 $\|$ - bars between primary families of languages (Hamito-Semitic, Kartvelian, IE, Uralic, Altaic, Dravidian, Elamic)
 $\|$, $\|$ - bars between secondary families (Anatolian IE, Narrow IE, Semitic, Egyptian, Cushitic, Chadic, Finno-Ugrian, Samoyed, Yukagir, Turkic, Mongolian, Tungusian, Korean)
 $\|$ - bars between branches of families (e.g. Germanic, Balto-Slavic, East Cushitic, Central Chadic, Finno-Permian, Ugrian)
 $\|$ (and \backslash) - bar between subbranches (e.g., Slavic [within Balto-Slavic], Iranian [within Indo-Iranian], Baltic Finnic, Ob-Ugrian, Bole-Tangale)
 $\|$ - bar between etymological entries of different words of the same root\morpheme or between different variants of a root (reconstructed within a branch of a family), as well as between different semantic variants of the same root (within a primary or secondary family)
 $\|$ - bars between etymological entries of different words of the same root\morpheme (reconstructed within a secondary family) or between secondary etymological entries (derivatives, compounds) within an entry denoted by $\|$, as well as between different roots belonging to the same secondary family and going back to the same N etymon
 $\|$ or $\|$ - bars between etymological entries of different words\stems of the same root\morpheme or between different roots going back to the same N etymon (reconstructed within a primary family)

]]]] - bars between etymological entries of different N etyma
 | - bar between etymological variants of the same N root (within a primary family)

||| - bars between reconstructions of different pN words or their variants within one N etymological entry

| before a D reconstruction means "a reconstruction distinguishing between voiceless and voiced cnss. (GSt.'s theory and IS's ideas on voiced geminates)"

¶ - sign preceding bibliographical and other notes referring to a secondary family

¶¶ - sign preceding bibliographical and other notes referring to a primary family

◇ - sign preceding bibliographical and other notes referring to a Nostratic etymon

◇◇ - sign preceding bibliographical notes referring to impressionistic comparisons which are not based on classical comparativistic methods (historical phonology, regular sound changes, etc.).)

≠ - sign preceding bibliographical reference to alternative etymological interpretations (not shared by the present author); sign 'not related to' (e.g. T *arka-n ≠ M *aru) and 'to be distinguished from' (e.g. OI √ ɛ ū - 'grant, bestow' ≠ √ ɛ ū - 'set in motion').

≠φ = untenable for phonetic reasons

≠σ = untenable for semantic reasons

≈ - sign preceding bibliographical reference to etymological interpretations that are only partially shared by the present author; (in semantic definitions and in transcription) "approximately"

* - precedes wrong reconstructions (or those not shared by the author of this dictionary) and wrong translations of words

{ } - brackets for the source of information (author or paper, indicated by means of abbreviations - see *Bibliography*)

∫ (preceding the abbreviated name of the bibliographical source, within {}-brackets) means "in X's notation" (e.g. {∫Bz}, {∫IS}, {∫SDM94})

σμ (preceding the abbreviated name of the quoted author) means that his semantic interpretation has been reformulated.

‡ (preceding the abbreviated name of the source) means "according to X's theory / hypothesis" (e.g. {‡SDM94}, {‡Hel.}, {‡Rsl.}).

∂ (preceding the abbreviated name of the source) means "according to X with A. Dolgopolsky's notation" (e.g. {∂ADb.} = "quoted after ADb., but in AD's notation").

{A ← B} - sign indicating that the author A quoted data recorded by B

{A ← ?} - sign indicating that we quote a paper by A, but the ultimate source of the information (scholar who recorded the word) is unknown

ε = 'a kind of'; used in semantic definitions if the exact specific meaning of the word\stem is unknown, e.g. 'ε plant' means that we know that the word denotes a plant but we do not know which one, 'ε to eat' means that this is a verb denoting some kind of eating.

÷ = 'akin to', 'cognate with'.

÷÷ = 'cognate with (families\macrofamilies outside Nostratic)'

+ stands between parts of a compound verb

+ after a root (Ari dīf+ 'steal') means that the root is used with sxs.

+ stands between semantic varieties of one descendant word, each one having its own etymology, e.g. D *mut- vi. 'end, terminate, be completed' < N *muda 'to finish' + D *mut- 'die' < N *mut∇ ≈ 'go away (?), die'.

ABBREVIATIONS
OF NAMES OF LANGUAGES, DIALECTS,
LANGUAGE FAMILIES, SUBFAMILIES,
AND SCRIPT SYSTEMS

A. Names of languages, dialects, and families of languages

The sigla of the dialects follow those of the languages either directly (Lp L = Lule Lappish) or after a colon (if several dialects are mentioned), e.g. Lp: N ḡuoros, L kuorōs 'empty' (= "Norwegian Lappish ḡuoros 'empty', Lule Lappish kuorōs id."). If related words of several languages & dialects share the same meaning, it may be indicated either once after the enumeration of the languages\dialects (e.g. Hb 'kɛlɛḅ, Ar kalb-, Ak kalbum 'dog') or after the first of the languages only with the indication "id." after the other language names (e.g. Hb 'kɛlɛḅ 'dog', Ar kalb- id., Ak kalbum id.). If we quote a common word shared by several dialects of the same language or by several languages of the same family and the word has the same phonologic form and the same meaning in all these dialects\languages, their names may be separated by a solidus (slant line), e.g. Os V/Vy/Ty {Ht.} (= Vakh, Vasyugan & Teryugan dialects of Ostyak, as described by L. Honti), Brj/Ged/Hd/Kmb {Hd.} (= Burji, Gede'o, Hadiya, Kambata languages, as described by G. Hudson). In these cases the name of the scholar (who recorded or registered the forms) refers to all languages connected by a solidus. Abbreviations: d. = dialect, sd. = subdialect, ssd. = subsubdialect, ds. = dialects, sds. = subdialects, lge. = language. ∇ = attested in different epochs, from the most ancient documents of the lge. (e.g., Eg ∇ = Eg [from the most ancient documents on]), f... = from ... on (of historical variants of lgs.) (e.g. Ak fOB = Akkadian from Old Babylonian on). In the text of the dictionary the word "dialect" is symbolized as dl., dial., or Δ.

A = Altaic

Ab = Abakan (a Sayan Samoyed dialect or a conglomerate of data mostly of Mator origin, after Msr. and Strl.)

AbA = Abkhazo-Adygh language family (West Caucasian)

- Abkh = Abkhaz
 AchEl = Achaemenian Elamite
 Adgg = Twareg of Adghagh
 Af = Afar; d.: Af N = Northern d., Af S = Southern d., Af Tjr = Tajurah d.
 AfR = Afro-Romance (a lge of Latin origin, surviving in North Africa up to the 10th-11th c., according to Lewicki LRA)
 AfS = Afar-Saho lgs.
 Afsh = Afshar
 AfshN = SOg of Afshar-e Nanakchi (near Kabul)
 Ag = Agaw
 AG = Angas-Goemay (Angas-Sura)
 Ah = Twareg of Ahaggar
 AHb = Ancient Hebrew (not attested in the Bible)
 Ai = Ainu (either belonging to or having a considerable amount of ancient loans from A)
 Ak = Akkadian; ds. : Ak A = Assyrian, Ak B = Babylonian, Ak LB = Late Babylonian (spB}, Ak M = Akkadian of Mari, Ak MA = Middle Assyrian (nA), Ak MB = Middle Babylonian (nB}, Ak NA = Neo-Assyrian (nA), Ak NB = Neo-Babylonian (nB), Ak OA = Old Assyrian (aA), Ak OB = Old Babylonian (aB}, Ak StB = Standard Babylonian (used in Assyria of the Neo-Assyrian period) ({CAD} SB), Ak YB = Young Babylonian (jB), OAk = Old Akkadian (aAK); f + dialect name means "from ... on": fOB = from Old Babylonian on"; Ak Bg = Ak of Boghazköy, Ak M = Ak of Mari, Ak Nz = Ak of Nuzi, Ak RS = Ak of Ras-Shamra tablets
 Al = Albanian; Al G = Geg, Al T = Tosk; subdialects: A = Arbanasi Geg (Dalmazia), Ba = Barile Tosk, Be = Berat Tosk, Ç = Çamërian Tosk (Çamërisht), D = Geg of Dushman, Db = Geg of Dibër, Dr = Southern Geg of Durrës, Elb = South Geg of Elbasan, F = Falconara Tosk (Italy), Fr = Tosk of Frashër, Gj = Labërian Tosk of Gjirokastër, Hm = Tosk of Himarë, Kr = Southern Geg of Krujë; Lb = Labërian Tosk (Labërisht), M = Malësiian Geg, Mn = Mandres Tosk, Mt = Geg of Mat, Mz = Tosk of Myzeqe, OT = Southern Geg of Old Tiranë, P = Prishtinë Geg (Kosovo), Prm = Tosk of Përmet, SG = Southern Geg, Sf = Sofiko Tosk, Sh = Shkodër Geg, Sl = Salamis Tosk (Greece), SM = San Marzano Tosk (Italy), U = Ukrainian Tosk, V = Vaccarizzo Tosk (Italy), Z = Zadrimë Geg; standard lgs: StAl = Modern Standard Al (based mainly on Tosk), StAl G = Standard Geg Al
 Alb = Alaba
 Ale = Aleut, ds. : Ale E = Eastern Ale, Ale W = Wesern Ale (incl. Ale A = Atkan), Ale Au = Attuan
 Alg = Alagwa
 AlK = AĚlu Kurumba (a Dravidian d. of the Nilgiri area)
 Alt = Altay-Kizhi; StAlt = горно-алтайский, ойротский
 Aly = Alyutor, алыторский

- Amh = Amharic
 Amn = Ammonite
 Amr = Amorite
 AmTg = Amur Tungusian (subbranch of the Tungusian language family)
 Anc... = Ancient ... (e.g. AncM = Ancient Mongolian, AncHs = Ancient Hausa, AncHb = Ancient Hebrew)
 And = Andian
 Anf = Anfillo (= Grotanelli's "Mao meridionale")
 Ang = Angas; d.: Ang H = High Angas, Ang K = Kabwir d.
 AnIE = Anatolian Indo-European
 'AQ = 'Ali-Qurchi Turkic (a SOg dialect, to the south of Arak, Iran)
 Ar = Arabic; ds.: Ar AT = Arabic of Algeria and Tunisia, Ar CA = Central African d., Ar CB = d. of the coastal part of Batina (Northern Oman), Ar ChCS = Arabic d. of Chad and Central Sudan, Ar ChrNG = Christian fallah d. of Northern Galilea, Ar Cr = Cairo Arabic, Ar D = Dathina d., Ar Df = Dofar (Zfar) d., Ar E = the modern dialects of Asiatic countries (incl. the literary language), Ar Eg = Egyptian d., Ar G = Gulf Arabic (the United Arab Emirates, Qatar, and Bahrain), Ar Hdr = Hadramauti d., Ar Hm = Hamata Arabic, Ar IB = d. of the inland part of Batina, Ar Ir = Iraqi Arabic, Ar Lb = Arabic of Libya, Ar Mgr = Maghrib Arabic (North Africa), Ar Mrc = Moroccan ds., Ar Ng = Ar. of Nigeria, Ar NY = North Yemenite ds. (including sds.: Ar NY K = k-subdialect, Ar NY SE - Southeastern sd., Ar NY S = Southern sds., Ar NY T = Tihamah sd.), Ar O = Oman Arabic, Ar P = Palestinian Arabic ds., Ar SA = South Arabian ds. (Yemen, southern Oman), Ar Sd = Sudanese ds., Ar SL = Syro-Libanese d., Ar Sp = Arabic of Spain (8th through 15th c.), Ar Y = Yemenite ds. of Ar, Ar Zhl = Arabic of Zahle (Lebanon); dialect groups: Ar B = Bedouin Arabic, Ar F = Fallah (rural) Arabic, Ar Ur = Urban Arabic
 Aram = Aramaic
 Arc... = Archaic ...
 ArcL = Archaic Latin
 Arg = Argobba
 Ari = Ari (a SOm lge.); ds.: Ari B = Bako (Baka), Ari G = Galila, Ari J = Ari-Jinka, Ari U = Ubamer
 Arm = Armenian (Grabar)
 Arr = Arbore
 Ary = Aryan (Indo-Iranian)
 AS = Anglo-Saxon (= Old English); d.: AS A = Anglian
 ASgr = Ayt-Seghrushen
 Ash = Ashkun (a Nuristani lge.)
 Ass = Assamese
 Assh = Ashasha (a Berber dialect)
 Av = Avestan; variants: Av G = Gatha-Avestan, Av Y (= YAv) = Young Av.

Aw = Awngi; dialects: Aw D = Dangela, Aw K = Kwakera
 Awj = Awjila
 Awr = Awroman
 Az = Azeri; ds.: Az Erz = Erzerum d., Az Mgn = Mughan sd., Az Nx = Nukha d., Az Qb = Quba d., Az Qz = Qazakh d., Az Shm = Shamakhï d., Az Sl = Salyan d. (салъянский диалект), Az Tbr = Tebriz d.
 Azm = Azumeyna (Banana-Marba)
 B = Berber
 Ba = Bao'an (Пао'ан, баоаньский)
 BA = Biblical Aramaic
 Bar = Barein
 BB = Bata-Bachama subbranch of CCh
 Bbr = Bubburè
 BChS = Bulgarian Church Slavonic
 Bcm = Bachama
 Bct = Bactrian
 Bd = Bade
 Bdg = Badaga (= Kn Bd)
 Bdh... = Buddhist, e.g. BdhSk = Buddhist Sanskrit, BdhSgd = Buddhist Sogdian
 Bdm = Buduma
 Bdt = Badditu, Baddito, Koyra
 Bdy = Bidiya
 Bel = Belari (a SD lge.)
 BF = Balto-Finnic
 Bg = Boghom (Burrum)
 BG = Bu-gàlambu
 BHb = Biblical Hebrew; variants: BHb B = BHb with Babylonian vocalization; BHb T = BHb with the traditional (masoretic) Tiberian vocalization
 BHlm = Ben-Halima (d. of Ulad-Ben-Halima, a B "Zenatian" d. of Central Morocco)
 Bhr = Bihari
 BIzn = Beni-Iznacen
 Bj = Beja; ds.: Bj A = Amar'ar , Bj B = Bishari, Bj Br = Bj of Barka, Bj Hd = Hadendawa, Bj N = the northern dialect (acc. to Reinisch), Bj R = the dialect described by Reinisch (Halanga?), Bj Rp = the dialect described by Roper
 Bk = Boka
 Bks = Bokkos
 Bl = Bolewa, Bolanchi, Bole; d.: BIF = Bolewa of Fika {Meek}
 Blc = Balochi (Beluji)
 Bld = Baldamu
 Blg = Bulgarian
 Blgh = Bulghar
 Bln = Bilin

Blq = Balqar
 Blr = Belorussian
 Blt = Baltic
 Bltr = Beltir (today a d. of Xk)
 BMa = Bambes(h)i Mao (= Bambassi)
 BMn = Beni-Menacer (a B d.)
 BMs = Beni-Messaud (a B d.)
 Bn = Boni; ds.: Bn Ba = Baddey, Bn Bi = Bireri, Bn Bl = Bala; Bn Bu =
 Bura, Bn J = Jara, Bn K = Kili, Bn Kj = Kije, Bn Sa = Safare
 Bnc = Bench (Gimirra-Bench, Benesho)
 Bngl = Bengali
 Bnn = Banana
 BnnM = Banana-Mouseye
 BNr = bokmål (riksmål, Danish-based variant of Norwegian)
 Bnt = Bantu
 Bot = Bot, Boot (a South Bauchi lge.)
 Br = Breton; d.: Cr = d. of the diocese of Cornouaille, L = d. of
 Léon, T = Trégorrois (diocese of Tréguier), V = d. of Vannes
 Brb = Baraba (= STt B); sd.: Brb Tk Tarmakül sd.
 Brg = Birgit
 Brgd = Burgandi (a D lge.)
 Brgn = Burgundian
 Brh = Brahui
 Brj = Burji
 Brn = Burunge
 Brt = Buryat; ds.: Brt A = Alar d., Brt Ag = Aga d. (агинский
 ГОВОРО), Brt E = Eastern ds. of Brt, Brt NU = Nizhneudinsk d.
 Brtt = Brittonic (Brythonic) Celtic
 Brw = Barawa
 Bs = Baiso
 Bsh = Bashqort (Bashkir)
 Bsk = Basketo (an Omotic lge.)
 BSl = Balto-Slavic
 BSlh = Beni-Salah
 BSn = Beni-Snus
 Bsq = Basque
 Bss = Bussa
 Bt = Bata
 BT = Bole-Tangale gr.
 BtD = Bata-Demsa
 BtG = Bata-Garua
 Bth = Bathari (Bathari)
 BtM = Bata-Malabu
 Btr = Butura (a lge. of the Ron gr.)
 Btw = Bettiwa
 BtZ = Bata-Zumo

- Bu = Bura
 BuP = Bura Pele
 Bz... = Byzantine, of the Byzantine period (e.g. BzJPA = Jewish Palestinian Aramaic of the Byzantine period, BzGk = Byzantine Greek)
 C = Cushitic
 C... = Central ...; ... C = Central d.
 CA = Berber of Central Algeria
 Car = Carian
 Cb = Chibak
 CC = Central Cushitic (= Ag)
 CCh = Central Chadic
 CD = Central Dravidian (Kolami-Parji) {Km., Zv.}
 Cez = Tsezian
 Cg = Tsagu
 Ch = Chadic
 Cha = Chara
 Chg = Chagatay (West Türkistan Islamic literary lge., late XIV-XX);
 Chg Xw = Chagatay of Xwarezm

AsT = Assyriological traditional transliteration (for Sumerian, Akkadian, Elamite, Hittite, and other languages with cuneiform script of Sumerian origin)

AT - Africanistic transcription (a variant of IPA, used for languages of Africa)

ET - Egyptological transliteration (Erman-Grapow's transliteration with recent modifications: z for EG's ζ , s for EG's σ). In this book c and ʒ are used instead of ET \underline{t} and \underline{d} ; x and x' are used for EG's \underline{h} and \underline{h} .

FUT - Finno-Ugric transcription

IET - traditional Indo-Europeanistic transcription

IPA - International Phonetic Alphabet, i.e. transcription of the International Phonetic Association

IT - Indological transcription (traditionally used for the IE, D, and Austroasiatic languages of India)

OT - Orientalistic transcription

SemT - Semitistic transcription (a variant of OT used for Semitic languages)

ST - Slavistic transcription

UT - Unified transcription, used in this book

**SYMBOLS OF NAMES OF SCHOLARS,
TITLES OF COLLECTIVE PAPERS,
SOURCES OF INFORMATION**

Scholars and scholarly papers

These symbols (printed in braces near quoted words or roots) indicate scholars who recorded, reconstructed them or registered them in their papers, as well as collected papers mentioning these words or roots. The sign] (preceding the symbol of the source, within {}-brackets) means "in X's notation" (e.g. {]Bz}, {]IS}, {]SDM94}). The sign † (preceding the symbol) means "according to X's theory, hypothesis" (e.g. {†SDM94}, {†Hel.}, {†Rsl.}); {†πAD} means "according to AD's hypothesis about the prosodic origin of some proto-Turkic ascending diphthongs". The sign ∂ (before the symbol of the source) indicates that the transcription of the author in question is indicated with Dolgopolsky's modification (interpretation). If an author has different notations or theories in his\her different papers, the abbreviation of the paper is added (e.g. {Ks. E}, {Ks. Z}, {Stl. ZCh}, {Stl. IF}). The sign "←" between names means "after" ("Bm. ← IS" = "Bomhard after Illich-Svitych"). Accordingly, "→" means "and from him..." ("Fr. → Hv." = "Freytag and from him Hava"). The signs "←?" (after the symbol of an author) mean "quoted by X from an unspecified source" (e.g. {Sk. ←?}). Abbreviations: "ms." = "manuscript", "p. c." = "personal communication", "s. v." = "sub voce" ("under the word"), "q. v." = "quod vide" ("which see"), "l. c." = "loco citato" (in the place cited above). If the symbol of an author precedes the meaning of a word\stem, it means that the scholar in question is responsible for the semantic definition rather than to the form of the word\stem.

The arrows → and ← (A → B or B ← A) between names of scholars mean that words\roots published (or registered, reconstructed) by a scholar A were later repeated in by a scholar B. "Msg Ng {GKrs. → Lk.} g i ' l i r η" means that Msg Ng g i ' l i r η was recorded by Gottlob Adolf Krause and later published by Johannes Lukas. {IS → BmK} means that the etymology (reconstruction) proposed by V. Illich-Svitych was later repeated or quoted by A. Bomhard and J. Kerns. The arrow ← with a query ("A ←?") means that the source of the form quoted by A (but not recorded by him!) is unknown.

(глагол состояния); vb. clc. = verbal collocation (a word group with functions and meaning of a verb); vb. n. = verbal noun, masdar; var. = variant; vd. = voiced; vi. = intransitive verb; vl = vulgar; vl. = (plain) voiceless; voc. = vocative, vocative form; vr. = verbum reflexivum; vt. = transitive verb; vw. = vowel; \mathcal{F} = see; WL = women's language; wv. = weak verb, i.e. a verb without apophony (in Gmc); WW = Wanderwort; ? μ - a morphologically doubtful connection (the derivation is not clear, the root structure is deviant, etc.); ? σ - a doubtful connection (for semantic reasons); ?? σ - a highly doubtful connection (for semantic reasons); ? $\sigma\mu$ - a word of doubtful semantic interpretation; ?? $\sigma\phi$ - a highly doubtful connection (for semantic and phonetic reasons); ? ϕ - a phonetically doubtful connection; ?? ϕ - a highly doubtful connection (for phonetic reasons); \uparrow = high style; \downarrow = non-standard; † = obsolete; $\leftarrow d$ = 'derived from'; $d \rightarrow$ = 'whence a derivative'; $\leftarrow b$ = 'borrowed from, a loan from'; $b \rightarrow$ = 'whence a borrowing'; \rightarrow = semantic change (**a** \rightarrow **b** = 'a changed to b'); \leftarrow = semantic change (**a** \leftarrow **b** = 'a results from semantic change of b'); \times - contamination (merger) of roots, stems, or words (**a** \times **b** = 'a contaminated [merged] with b'); \approx , \pm = 'approximately' (on the reconstructions and the meaning of reconstructed roots\words). Roman figures in small caps (with or without addition of BC or AD) denote the century: XIII means "the 13th c.", VI AD = "the 6th c. AD". Roman figures preceded by \geq mean "from ... cent. on" (e.g. \geq XIII = "from the 13th cent. on").

The sign J (preceding the symbol of the source, within {}-brackets) means "in X's notation" (e.g. {JBz}, {JIS}, {JSDM94}). The sign † (preceding the symbol) means "according to X's theory, hypothesis" (e.g. {†SDM94}, {†Hel.}, {†Rsl.}); {† π AD} means "according to AD's hypothesis about the prosodic origin of some proto-Turkic ascending diphthongs". The sign ∂ (before the symbol of the source) indicates that the transcription of the author in question is indicated with Dolgopolsky's modification (interpretation).

On semantic designation for subfamilies (or sub-sub-families) of languages.

If the semantic definition of a word or a root is indicated with the proto-form only, it means that it is preserved in all descendant languages mentioned in the entry; e.g. "pCh * $t\grave{a}b\grave{u}$ ∇ 'mud' > WCh: Hs $t\grave{a}b\grave{o}$, Gw $t\grave{o}bo$ | Bl $te\grave{b}\grave{b}i$, Ngm $nd\grave{e}\grave{b}i$ | Ngz $t\grave{a}b\grave{o}$ | Cg $nd\grave{a}b\grave{a}k^y\grave{a}n$, Kry $t\grave{a}b\grave{a}k\grave{u}$, Sir $t\grave{e}\grave{b}\grave{e}h\grave{i}$, Mbr $nd\grave{a}b\grave{a}k\grave{u}$, Dir $\grave{a}t\grave{u}\grave{b}\grave{a}k\grave{u}$ | Kir $nd\grave{o}p$ or $^n d\grave{o}p$, Plc $ndu\omega\grave{z}p$ or $^n du\omega\grave{z}p$, Dw $nd\omega\grave{a}p$, i.e. $^n d^{\omega}\grave{z}p$ or $\grave{u}d^{\omega}\grave{z}p$ || CCh: Tr: Pdl $t\grave{e}bd\grave{i}$, Hw $t\grave{a}b\grave{u}r\grave{a}$, G'nd $t\grave{e}pt\grave{a}$, Gbn $t\grave{e}pt\grave{a}$, Boka $t\grave{e}pt\grave{e}$ | McHigi: FIM $d\grave{u}b\grave{u}$ | Ktk {Nw.} $nda\grave{b}\grave{e}$ || ECh: Tmk $d\grave{u}b\grave{o}$, Nd D

dəbyà" = "pCh *tab∇ 'mud' > WCh: Hs tàbò id. (↳ Ngz tàbó), Gw tòbo id. | Bl teb̄i id.", etc.

Abbreviations and signs within semantic definitions: anyth. = anything, bc. = become, esp. = especially, smb. = somebody, so. = someone, somebody; sth. = something; th. = thing; \ = or, as well as (between alternative parts within semantic and grammatical definitions) (e.g., 'be weak \ soft' = 'be weak, be soft', sx. of du.\pl. = sf. of du., sx. of pl., 'some-\any-thing' = 'something, anything'); ≈ = approximately; ∈ = a kind of; us. = usually; '↑' = anaphoric sign "the meaning of a N word which is identical with the abovementioned meaning of the same root" (in cross-references within the same entry). In French definitions: ch. = chose, qch. = quelque chose, qn. = quelqu'un. In German definitions: bes. = besonders, d. h. = das heißt, etw. = etwas, jem. = jemand(-em, -es), jem-m = jemandem, jems. = jemandes. In Italian definitions: qs. = qualche cosa. In Latin definitions: pec. = peculiariter (especially).

N. b.: If a root\stem of a daughter language family or its branch is found in two or more etymological entries (due to the merger of N roots), it is specified (traced up to the level of attested languages) in one entry only. In the other entry\entries there is a short reference note with a siglum "q.v. ffd." (= "see for further details") that refers the reader to the entry with full information.

Signs denoting reconstructions and hypotheses:

- * - precedes a reconstructed form, word, or morpheme
- ** - precedes an indirect reconstruction (e.g. internal reconstruction)
- *° - precedes a reconstructed proto-form represented in one branch (of the family) only
- * - precedes reconstruction of meanings
- ** - precedes wrong reconstructions (or those not shared by the present author) or wrong translations of words
- ⇔ precedes bibliographical indication of opinions that are not shared by the present author
- ¶ precedes reference to literature concerning the word\morpheme in question in a branch of a language family or precedes comments on the morpheme\word in such a branch
- ¶¶ precedes reference to literature concerning the word\morpheme in question in a language family or precedes comments on the morpheme\word in such a family
- ◇ precedes reference to literature concerning a proto-Nostratic word (root) or comment on a Nostratic word

◇ precedes reference to doubtful opinions concerning etymologies based on long-range relationship of languages

BIBLIOGRAPHY

This bibliography includes papers explicitly quoted in the text, as well as other sources of background information (dictionaries, grammars, studies in comparative, historical and synchronic phonology, morphology, etymology, language relationship etc.). It may be useful for further research in historical and comparative linguistics.

In references the sign \forall means "the whole paper". "S.p." (and "S. p.") means "separate pagination" (of an article within a journal or book); "Dict." = Dictionary; "fn." = footnote, "l.c." = loco citato, "n. t." = no title, "s. a." (or "s.a.") = sine anno (without indicated year), "s. l." (or "s.l.") = sine loco (without name of the city where the book was published or written), "pl." = plate(s); "n. s.", "n.s." = new series, nouvelle série (= "N.F." = neue Folge), "repr." = reprinted, "transl." = translation, "conf." = conference, "diss." = dissertation, "ed." = edited, edition, "Ms." = unpublished manuscript, "Sep." = Separatum, "PhDD" = PhD dissertation, "PhDT" = thesis of a PhD dissertation. For papers in German: "Jg." = Jahrgang, "hrsg." = herausgegeben, "u. a." (or "u.a.") = und andere, "≈" = approximately (on the years of publication). The superscript P denotes preprints. "MF" = Microfilm; "p.c." means "personal communication". For papers in Russian and other languages of the former Soviet Union: "ADD" = Avtoreferat doktorskoj disseracii, "AKD" = Avtoreferat kandidatskoj disseracii, "DD" = Doktorskaja dissertacija, "KD" = Kandidatskaja dissertacija. In many cases DD and KD remain as unpublished manuscripts, preserved in public libraries in the USSR or Russia, and are also available as published ADD and AKD.

In the etymological entries lists of bibliographical sources and comments are preceded by special signs:

the sign ¶ precedes a list of sources for a branch of a language family, as well as comments that refer to a branch of a family,

the double sign ¶¶ precedes sources and comments for a family of languages,

the sign ◇ precedes sources and comments for the Nostratic macro-family,

the sign ◊ precedes doubtful bibliographical sources and comments that refer to inter-family relationship.

The symbol \Leftrightarrow precedes bibliographical indication of opinions that are not shared by the author of this dictionary. Those which are only partially shared by me are indicated by the symbol \approx .

If there are several numbers (or fascicles) within a volume of a journal, the dash ("/") is used, e.g. "XXXIII/6" or "1888/3".

In this bibliography the publications are arranged according to the rules of Latin alphabetic order, without taking into account special signs. There is only one exception: initial Ç of the bibliographical abbreviation follows the initial C.

Cyrillic script:

1. For Russian (including letters of the pre-1918 orthography): a = а, b = б, c = ц, ch = ч, d = д, e (in the syllable-initial position) = э, e (otherwise) = е, ë = ё, è = э, f = ф, g = г, i = и, j (word-final or preceding a consonant) = й, jj (preceding a vowel) = й, ja = я, je = е, jë = ё, ju = ю, 'ji = ъи, k = к, l = л, m = м, n = н, o = о, p = п, r = р, s = с, sh = ш, shch = щ, t = т, u = у, v = в, x = х, y = ъи, z = з, zh = ж, ' = ъ, " = ъ; in rendering the pre-1918 orthography a zero after the word-final consonant renders ъ, é = ѐ, jé (in the syllable-initial position) = ѐ, ё =

Ѡ (capital letter Ѡ). $v = v$. The geographical names are transliterated according to another tradition (e.g., the cons. x is transliterated as "kh", Й is rendered as "y", Я as "ya", Ю as "yu", Ы as "i", the syllable-initial e is transliterated as "ye").

2. For Ukrainian: as for Russian, except: $e = e$ (always), $je = \epsilon$, $h = \Gamma$, $i = \dot{i}$, $ji = \ddot{i}$, $y = \text{И}$, $\acute{n} = \text{НЬ}$.

2a. For Belorussian: as for Russian, except $i = \dot{i}$, $w = \ddot{y}$, $h = \Gamma$ and $\grave{e} = \text{Э}$.

3. For Bulgarian: as for Russian, except: $e = e$ (always), $\text{Ъ} = \check{a}$.

3a. For Macedonian (Slavic): as for Russian, except: $j = y$ (always except for $ye = e$), $\acute{k} = \hat{k}$

4. For Serbian: the Croatian (romanized) spelling is used.

5. For Azeri (including both the old and the new Cyrillic orthography): as for Russian, except: $\ddot{a} = \text{Ә}$; $gh = \text{Ғ}$; $h = \text{Һ}$; $\dot{i} = \text{Ы}$; $j = \text{Ҝ}$; $ky = \text{К}$; $\ddot{o} = \text{Ө}$; $\ddot{u} = \text{Ү}$; $y =$ (in the old orthography) Й , (in the new orthography) j ; $ye =$ (in the old orthography in the syllable-initial position) e , (in the new orthography) $j\epsilon$; $\text{ҫа} =$ (old orth.)
