

An Introduction to CMJ

*Lizzy Day, University of Cambridge School of Clinical Medicine,
Addenbrooke's Hospital, Cambridge, CB2 0SP, UK*

Welcome to the Cambridge Medical Journal. First published in 1978, representing the work of the students of Cambridge Clinical School, the journal covers a wide range of topics relating to medicine. In 2010, 32 years on, we are bringing the CMJ up to date with an online only version. Covering new sections, the new CMJ aims to be more accessible and useful to its readership, as well as expanding its reach.

With this in mind, we hope to achieve the following aims:

1. To provide a medium for medical students to communicate their ideas, opinions and research
2. To inform our readership, with particular emphasis on content relating to medical student education.
3. To encourage critical thinking and clinical research in the medical student community.
4. To showcase the writing and research talents of medical students.

We aim to move beyond purely the Cambridge community and welcome articles from students throughout the UK. If you are a student we challenge you to write and submit your work; if not, we hope you enjoy the range and quality of articles that we present.
