

URIs are stateless

Activity focused tabs, as activities each suggest different UI.

The purpose of this site is to provide a toolkit for students, oriented around supervision-preparation, revision, examination, and reading. It is based on user research as to how students revise at Cambridge.

Maximum real-estate for object in focus by forcing branding into sidebar.

Rightbar, rather than left, to break from idea of sidebar "sectioning" contents.

Persistent "related" box allows associative browsing

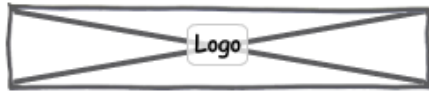

Students liked English Faculty's always available links to major documents.

See note on mindmap mockup.

Conceptually a todo is very close to a level in a mindmap. It probably makes sense to think of ways of allowing users to interchange them, to keep the app fluid.

These icons, like on the mindmaps, are FreeMind style "stickers" whose meaning is given by the user.
