

Autophagy in childhood neurological disorders

doi: 10.1111/dmcn.14276

In the version of this article¹ originally published in print and online, there was an error in the second affiliation of David C Rubinsztein. It read 'UK Dementia Research Institute, Wellcome Trust, Cambridge Biomedical Campus, Cambridge, UK' but should have read 'UK Dementia Research Institute, Cambridge Biomedical Campus, Cambridge, UK'. This has been corrected in the online version.

Mac Keith Press

Ethics in Child Health

Principles and Cases in Neurodisability

Edited by **Peter L Rosenbaum, Gabriel M Ronen, Eric Racine, Jennifer Johannesen, and Bernard Dan**

From the Foreword

"This is a must-have book for everyone who works in the field of clinical childhood disability. There is something for all clinicians, therapists, nurses, and doctors whether in training or established in clinical practice for many years. This book 'works' because it is full of real stories of the situations we will all recognise from our own practice, written and edited by internationally renowned and respected clinicians and others with direct experience, who share their 'workings out' of the ethical issues discussed."

Dr Karen Horridge, Chair, British Academy of Childhood Disability
