

Figure 4. Shown are means and standard errors (SE) of the percentage signal change during the MID outcome phase in the habenulae drawn based on image contrast. A) right habenula, B) left habenula, C) bilateral habenulae. All bar graphs are separated into Loss avoidance, Neutral, and monetary Loss outcomes. Significance levels are indicated by asterisks, where * equals $p < .05$, ** equals $p < .01$ and *** refers to $p < .001$.
